Help & documentation

Everything you can change in the theme, explained step by step: what each setting does, when to use it and how.

Getting started

Theme Options is the control panel of the theme. You find it in the dashboard menu on the left.

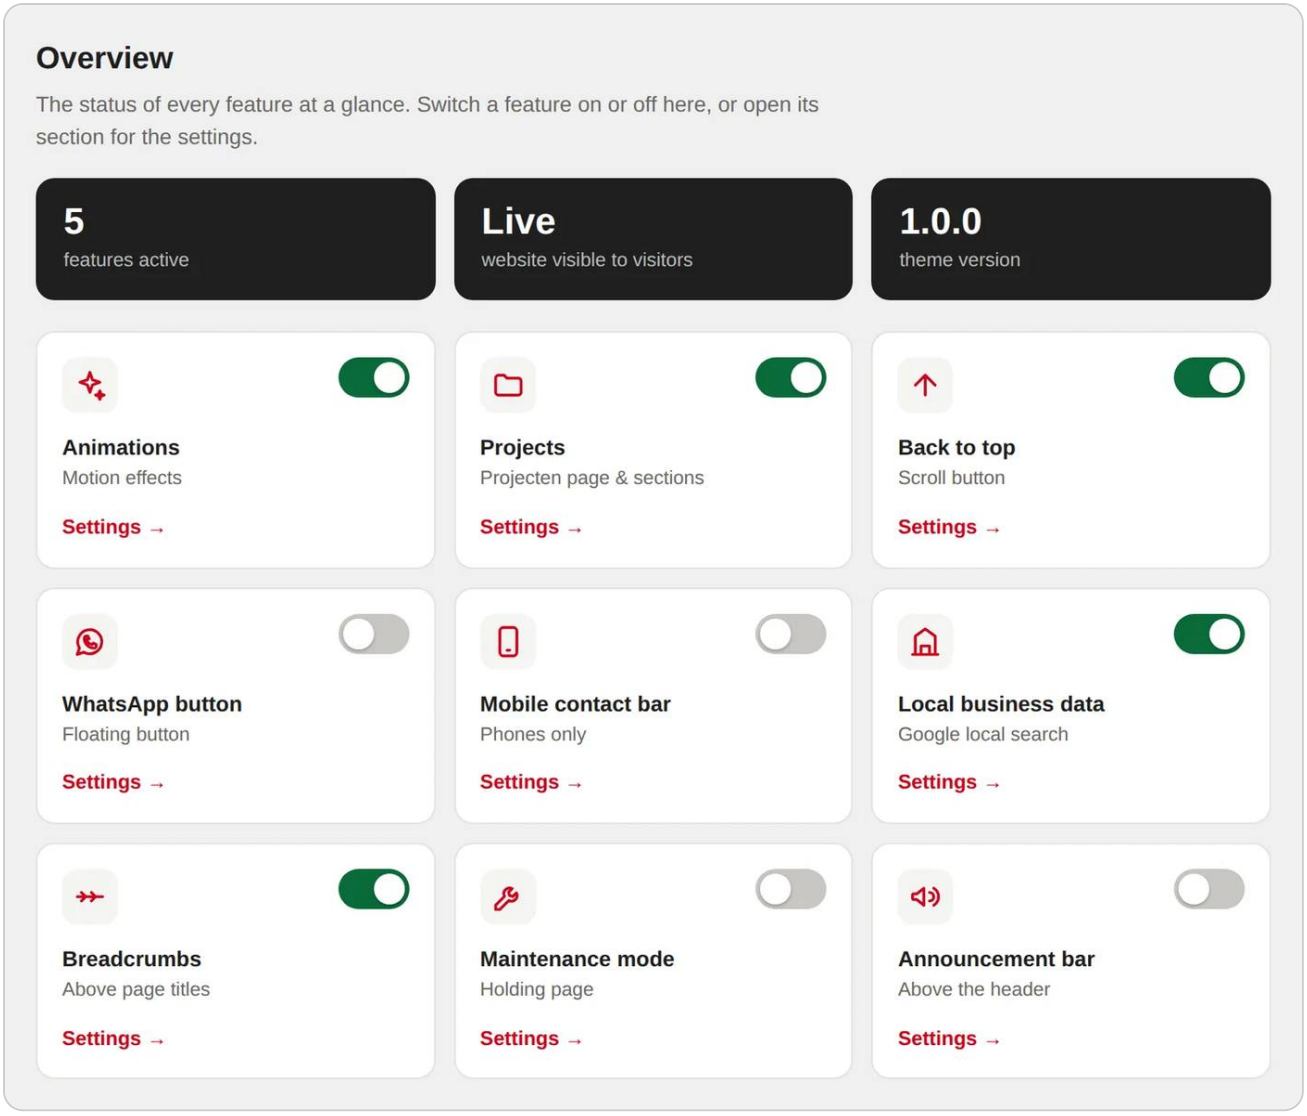

How to use it

1. Go to **Dashboard → Theme Options**.
2. Choose a section in the menu on the left (on a phone: at the top).
3. Change a switch or a field. A bar appears at the bottom: **You have unsaved changes**.
4. Click **Save changes**. The change is live right away — the cache is cleared automatically.

Changed your mind? Click **Discard** in the bottom bar to undo all unsaved changes.

Overview

The start screen of Theme Options: the status of every feature at a glance.

What each setting does

Status cards

Three dark cards at the top: how many features are on, whether the website is **Live** or in **Maintenance** (red), and the theme version.

Feature cards

One card per feature with a switch. Turn a feature on or off right here.

Settings →

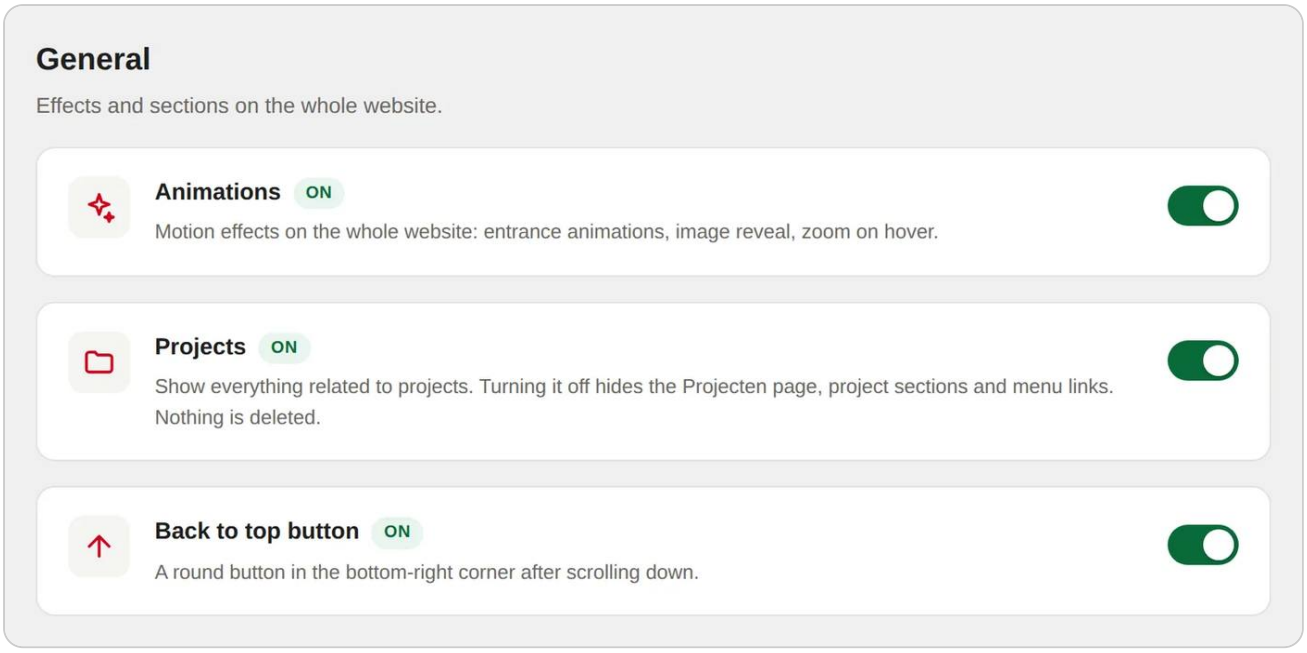

Opens the section with all settings of that feature.

How to use it

1. Open **Theme Options** — the Overview opens first.
2. Use a switch to turn a feature on or off.
3. Click **Save changes**.

General

Effects and sections that apply to the whole website.

What each setting does

Animations

Motion effects on the whole website: elements that fade in while scrolling, images that reveal, zoom on hover. Turn it off for a calm, static website.

Projects

Shows everything related to projects. When off, the projects page, the project sections and the menu links are hidden. Project pages show a “page not found” (404) to visitors and are removed from the sitemap. **Nothing is deleted** — turn it on again and everything is back.

Back to top button

A round button in the bottom-right corner that appears after scrolling down. One click brings the visitor back to the top.

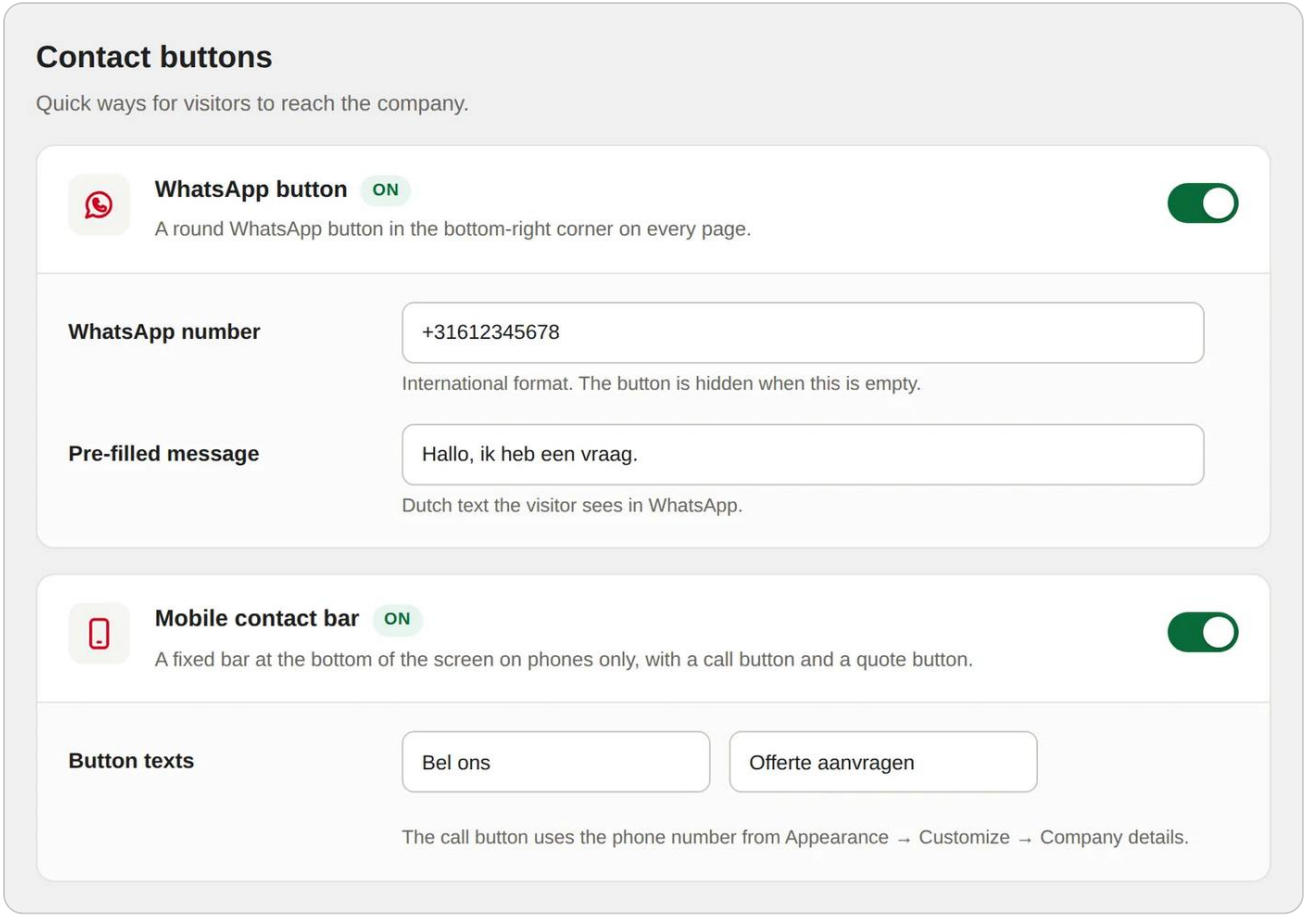

How to use it

1. Go to **Theme Options** → **General**.
2. Turn a switch on or off.
3. Click **Save changes** and check the website.

> Use **Projects: off** when you do not have real projects to show yet. Administrators can still open the project pages, with a notice at the top.

Contact buttons

Quick ways for visitors to reach the company.

What each setting does

WhatsApp button

A round WhatsApp button in the bottom-right corner on every page. A tap opens WhatsApp with your number and a ready-made message.

WhatsApp number

Your number in international format, for example `+31612345678`. When this field is empty, the button is hidden.

Pre-filled message

The text the visitor sees in WhatsApp before sending. Write it in the language of the website.

Mobile contact bar

A fixed bar at the bottom of the screen, **on phones only**, with a call button and a quote button.

Button texts

The texts of the two buttons. The call button uses the phone number from **Appearance → Customize → Company & contact**. The quote button opens the contact page.

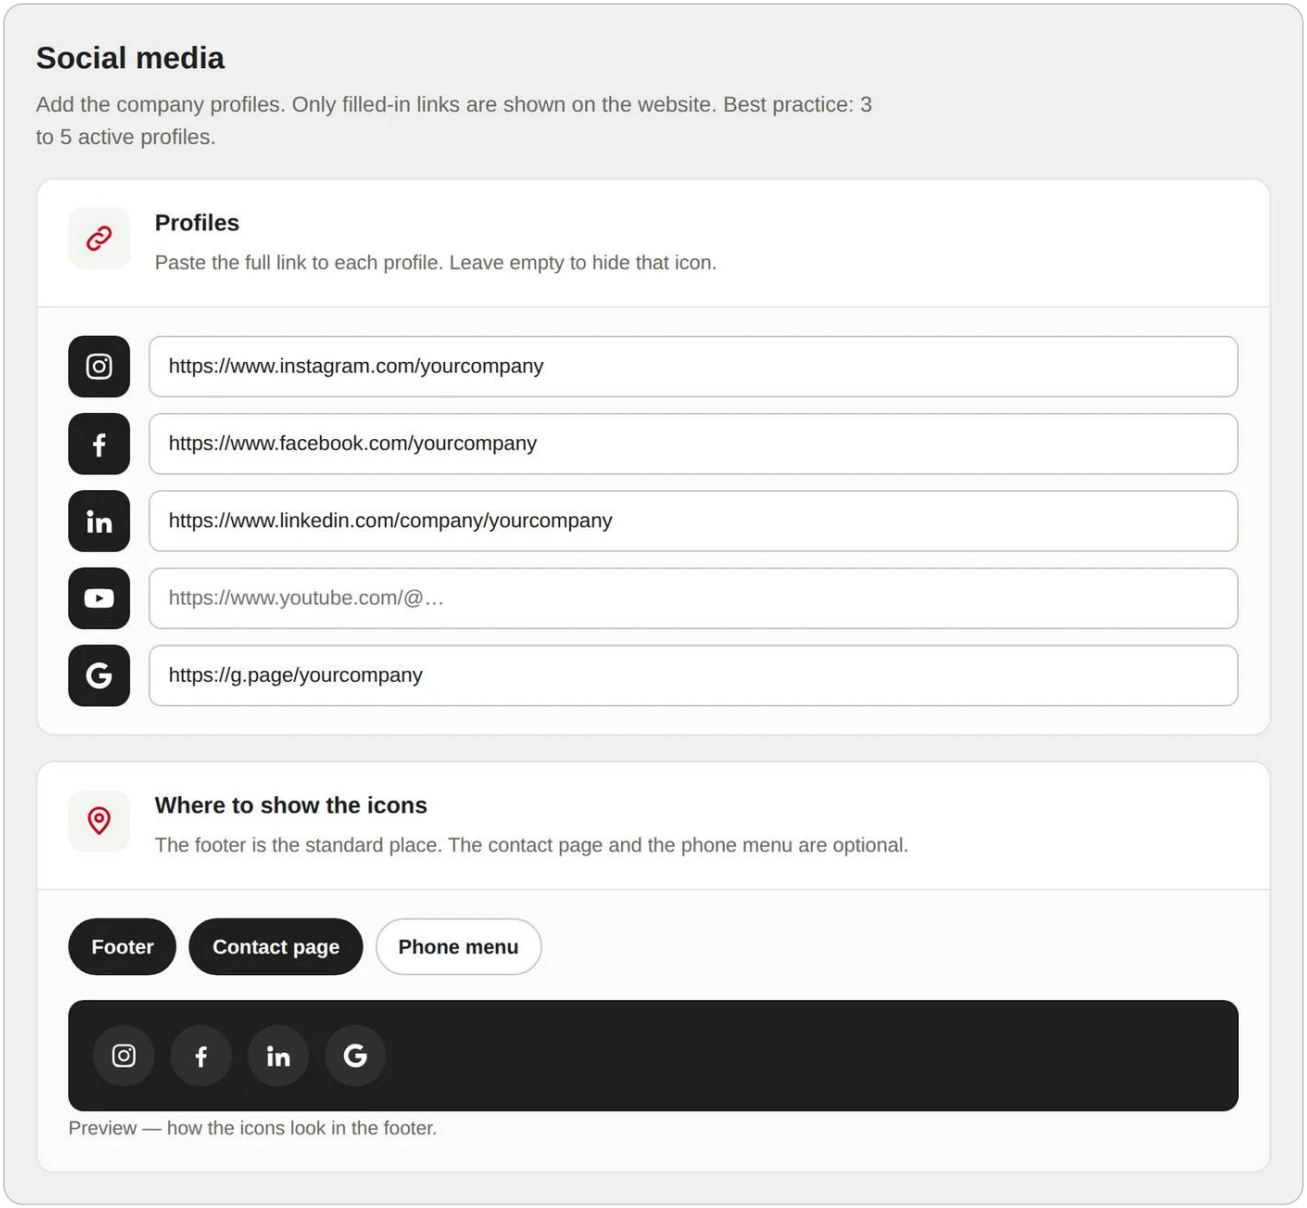

How to use it

1. Go to **Theme Options → Contact buttons**.
2. Turn on **WhatsApp button** and/or **Mobile contact bar**. The fields appear below the switch.
3. Fill in the number and the texts.
4. Click **Save changes** and test it on your phone.

⚠ Check the phone number in the Customizer first. Without a phone number the call button cannot work.

Social media

The company profiles on social media, shown as round icons.

What each setting does

Profiles

Instagram, Facebook, LinkedIn, YouTube and Google Business. Paste the full link of each profile. **Leave a field empty to hide that icon.**

Where to show the icons

Choose the places: **Footer** (the standard place), **Contact page** and **Phone menu**. A black chip means: shown.

Preview

Shows how the icons look in the footer.

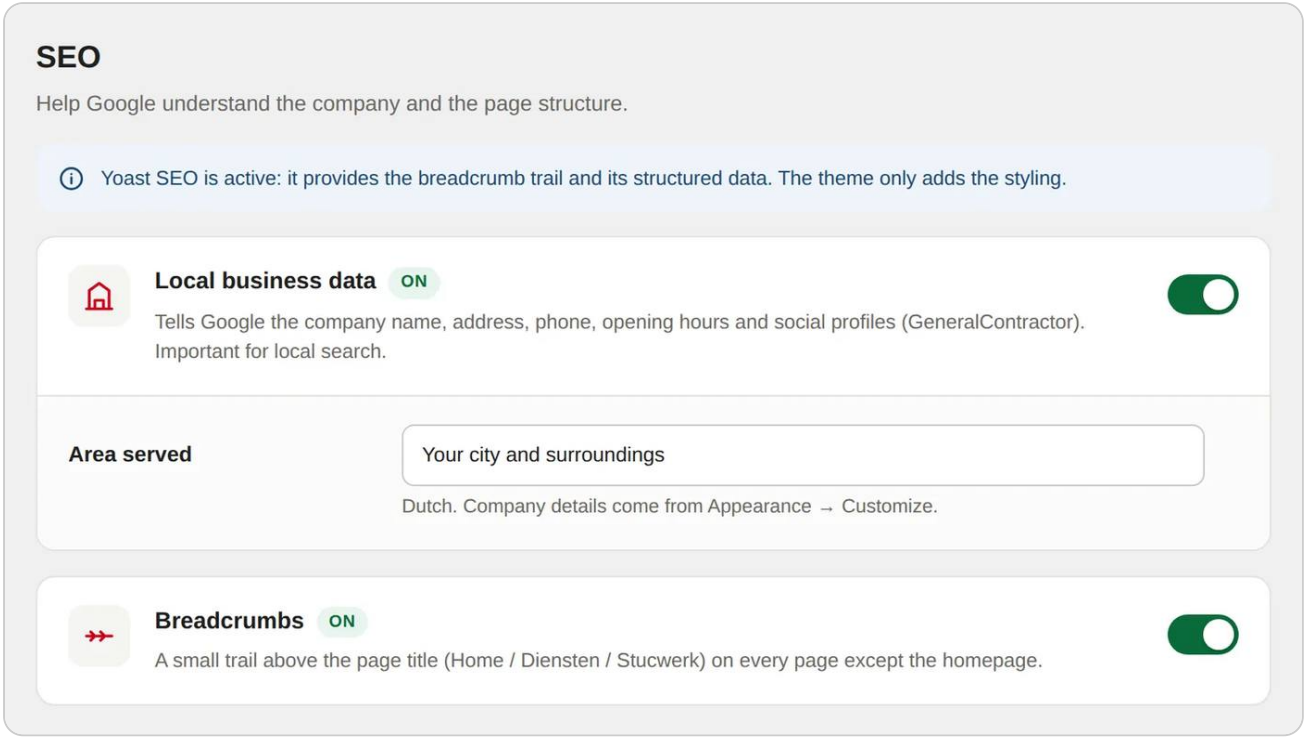

How to use it

1. Go to **Theme Options → Social media**.
2. Paste the link of each profile, starting with `https://`.
3. Choose where the icons appear.
4. Click **Save changes**.

Best practice: 3 to 5 active profiles. Only add profiles you really keep up to date.

SEO

Helps Google understand the company and the structure of the pages.

What each setting does

Local business data

Adds hidden company data for Google (type `GeneralContractor`): name, address, phone, opening hours and social profiles. Important for local search results and Google Maps. The data comes from **Appearance** → **Customize**.

Area served

The region where the company works, for example the city and surroundings. Write it in the language of the website.

Breadcrumbs

A small trail above the page title (for example *Home* / *Services* / *Tiling*) on every page except the homepage. Visitors see where they are, Google understands the structure.

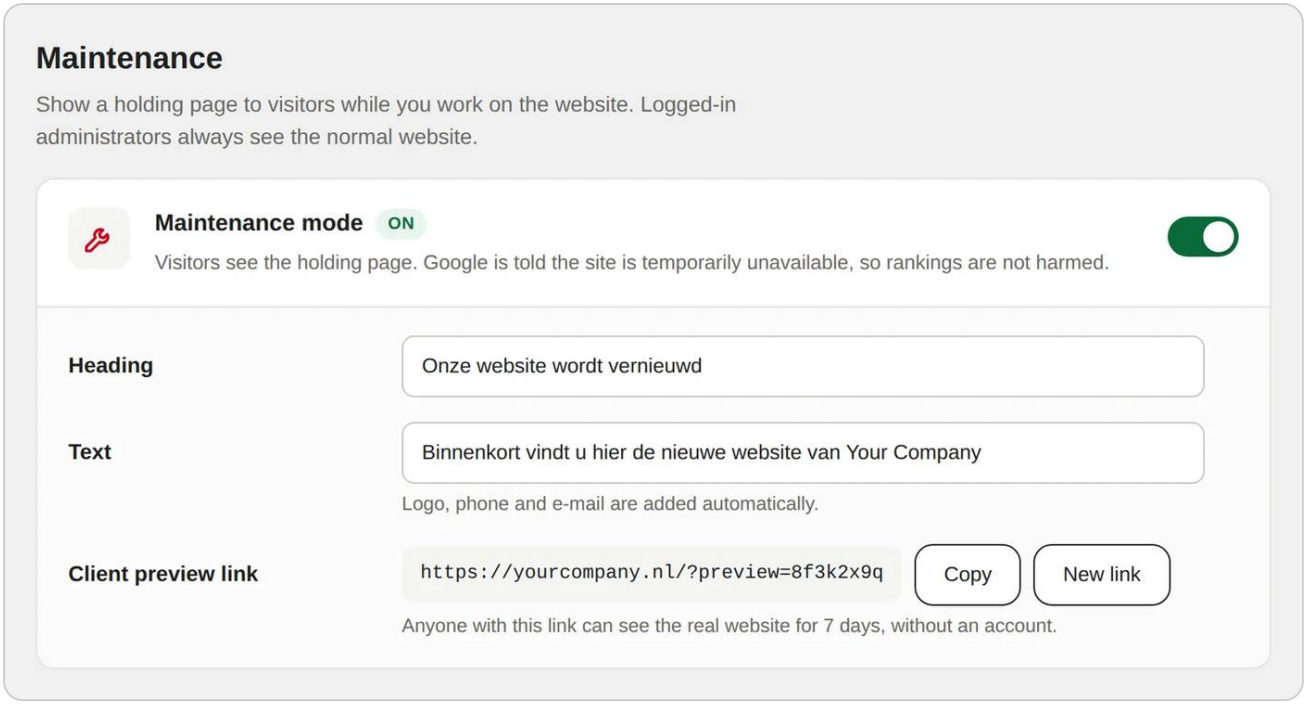

How to use it

1. Go to **Theme Options** → **SEO**.
2. Keep both switches on (recommended).
3. Check **Area served**.
4. Click **Save changes**.

Is **Yoast SEO** or **Rank Math** active? Then that plugin makes the breadcrumbs and the theme only adds the styling. A note at the top of this section tells you which one is used.

Maintenance

Shows a holding page to visitors while you work on the website.

What each setting does

Maintenance mode

Visitors see a holding page in the style of the website. Google is told the site is temporarily unavailable, so **rankings are not harmed**. Logged-in administrators always see the normal website.

Heading & Text

The title and text on the holding page. Logo, phone and e-mail are added automatically.

Client preview link

A secret link to share with someone without an account. Whoever opens it sees the real website for **7 days**. Click **Copy** to copy it.

New link

Makes a new preview link. **The old link stops working immediately.**

How to use it

1. Go to **Theme Options** → **Maintenance**.
2. Turn on **Maintenance mode** and check the heading and text.

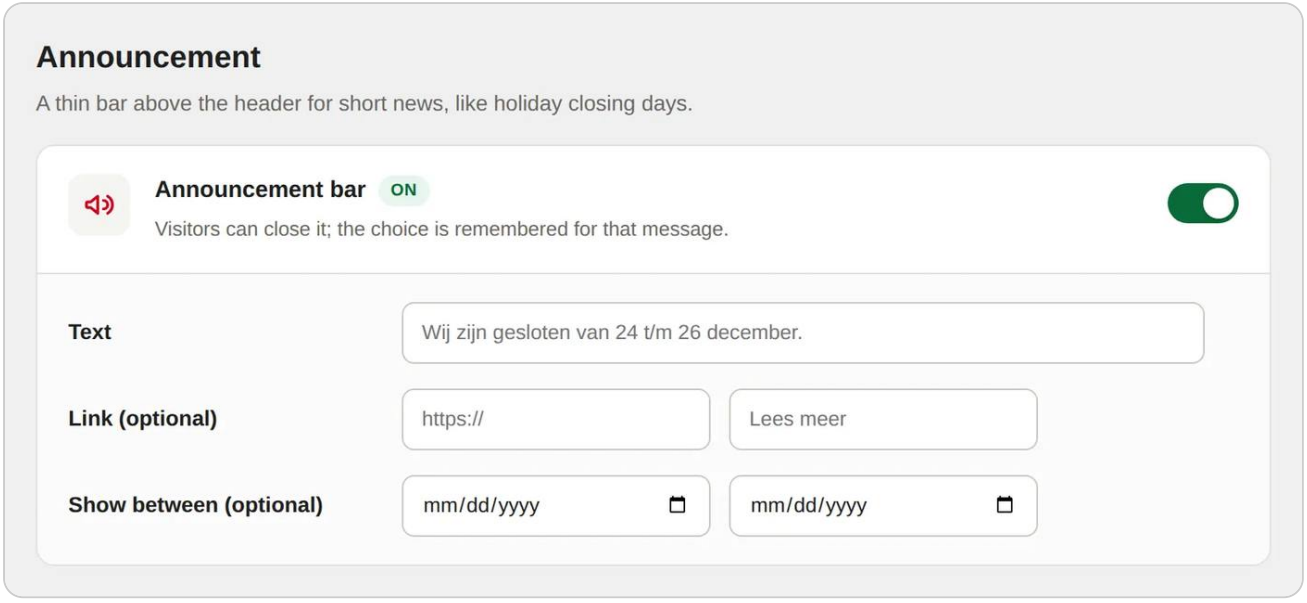

3. Click **Save changes**. The status card on the Overview turns red.
4. Want someone to see the website? Copy the **Client preview link** and send it.
5. Finished? Turn maintenance mode off and save.

> ⚠ To see the holding page yourself, open the website in a private window (you are logged in, so you see the normal website).

> ⚠ Do not forget to turn maintenance mode off when the website is ready.

Announcement

A thin bar above the header for short news, like holiday closing days.

What each setting does

Announcement bar

Turns the bar on or off. Visitors can close it with the ×; the website remembers this for that message.

Text

The short message, one sentence.

Link (optional)

A link with its own text, for example “Read more”. Leave empty for no link.

Show between (optional)

A start and end date. The bar only shows in that period. Leave empty to show it all the time.

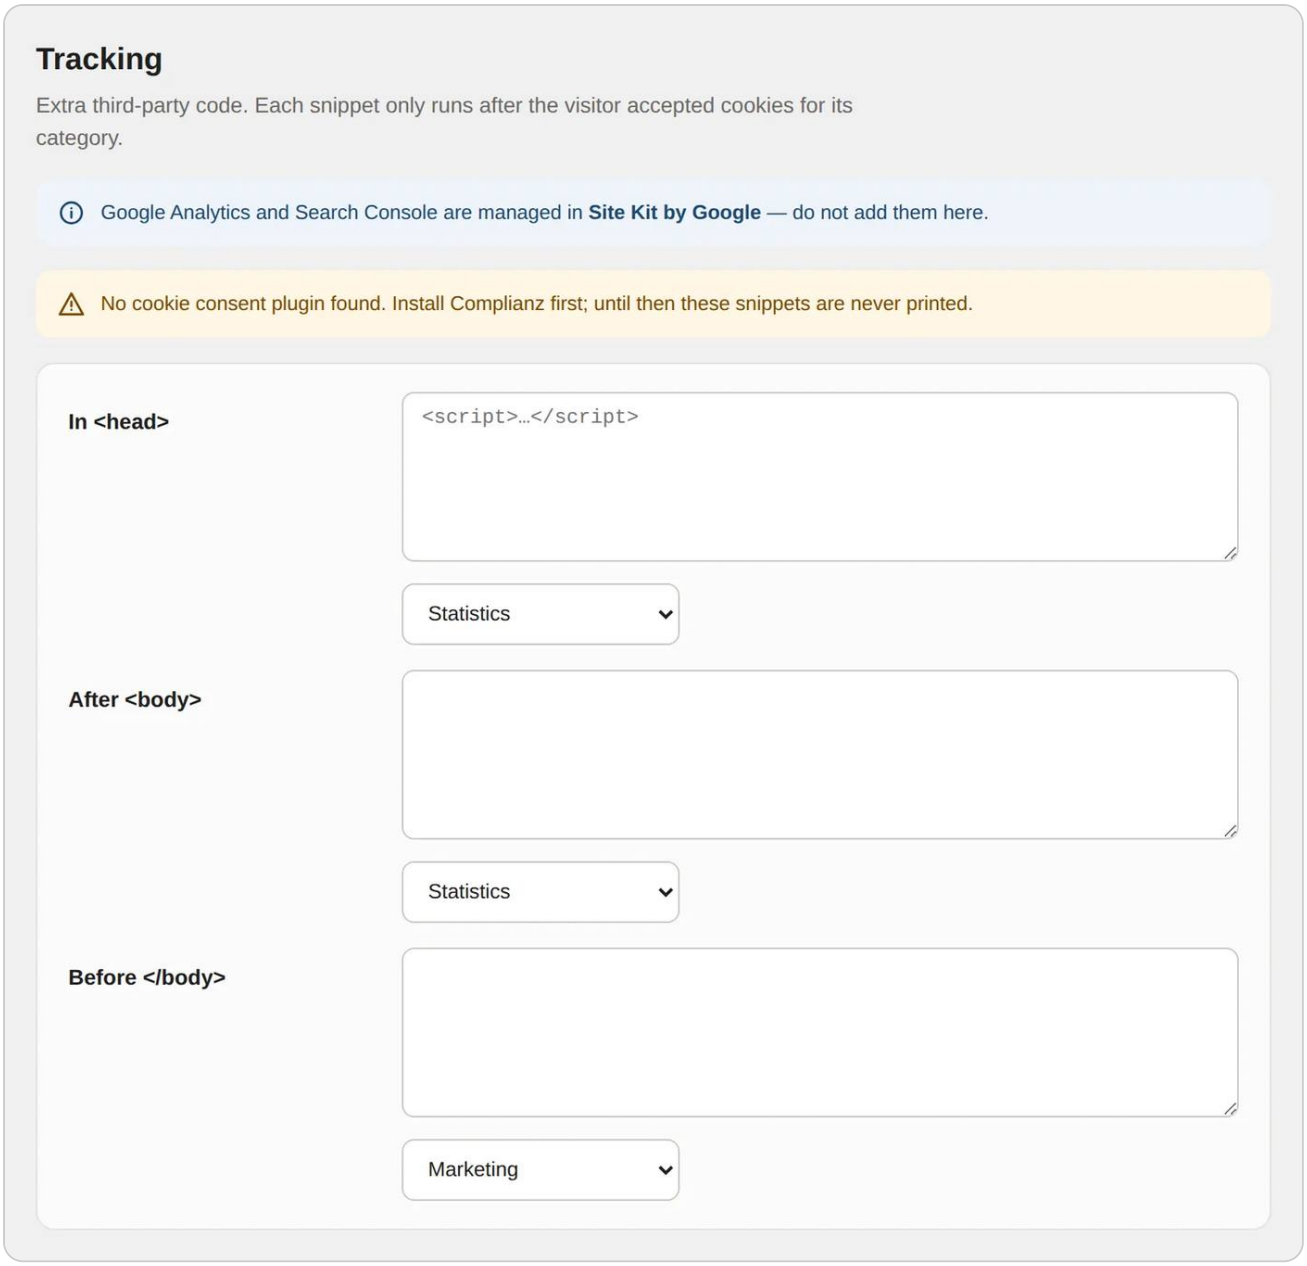

How to use it

1. Go to **Theme Options** → **Announcement**.
2. Turn on **Announcement bar** and write the text.
3. Optional: add a link and dates.
4. Click **Save changes**.

Changed the text? The bar shows again for everyone, also for visitors who closed the old message.

Tracking

A place for extra third-party code, such as a marketing pixel. Every snippet only runs after the visitor accepted cookies.

What each setting does

In <head> / After <body> / Before </body>

Three places in the page. The provider of the code tells you where to paste it.

Consent category

Choose the cookie category of each snippet: **Functional**, **Preferences**, **Statistics** or **Marketing**. The code only runs when the visitor accepted that category.

How to use it

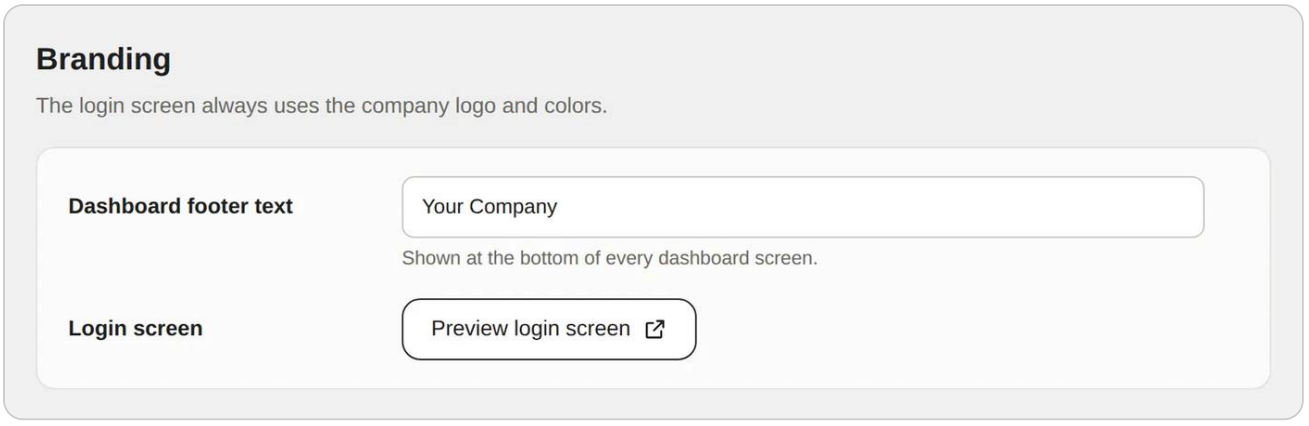

1. Install a cookie plugin first (for example **Complianz**).
2. Go to **Theme Options** → **Tracking**.
3. Paste the code in the right place and choose its category.
4. Click **Save changes**.

> ⚠ Without a cookie consent plugin, the snippets are **never** printed. This protects you under privacy law (GDPR).

> ⓘ Google Analytics and Search Console are managed in **Site Kit by Google** — do not add them here.

Branding

The look of the dashboard and the login screen.

What each setting does

Dashboard footer text

A short text at the bottom of every dashboard screen, for example the company name.

Login screen

The login screen always uses the company logo and colors. Click **Preview login screen** to see it.

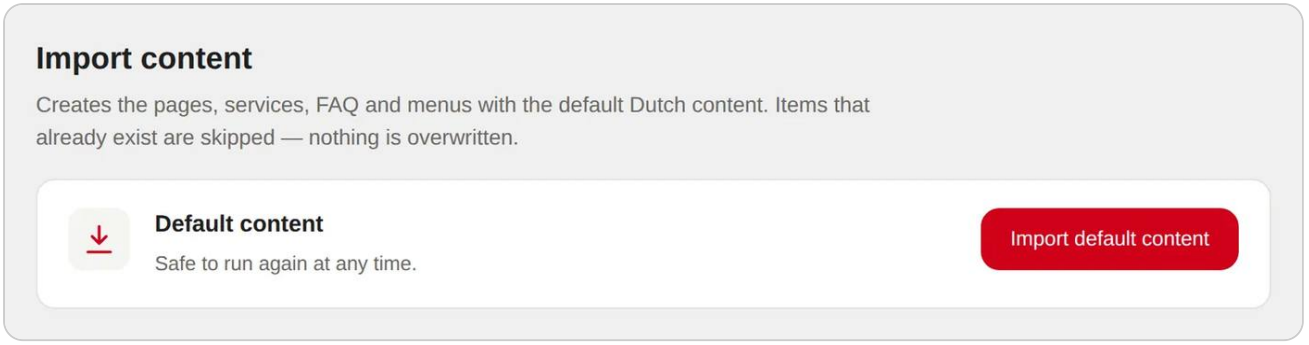

How to use it

1. Go to **Theme Options** → **Branding**.

2. Change the footer text.
3. Click **Save changes**.

Import content

Creates the standard pages, services, FAQ and menus with the default content in one click.

What each setting does

Import default content

Creates everything that is missing. Items that already exist are **skipped — nothing is overwritten**. It also sets the homepage and the privacy page when those are not set yet.

Result

After the import you see a list: **Created** and **Skipped**.

How to use it

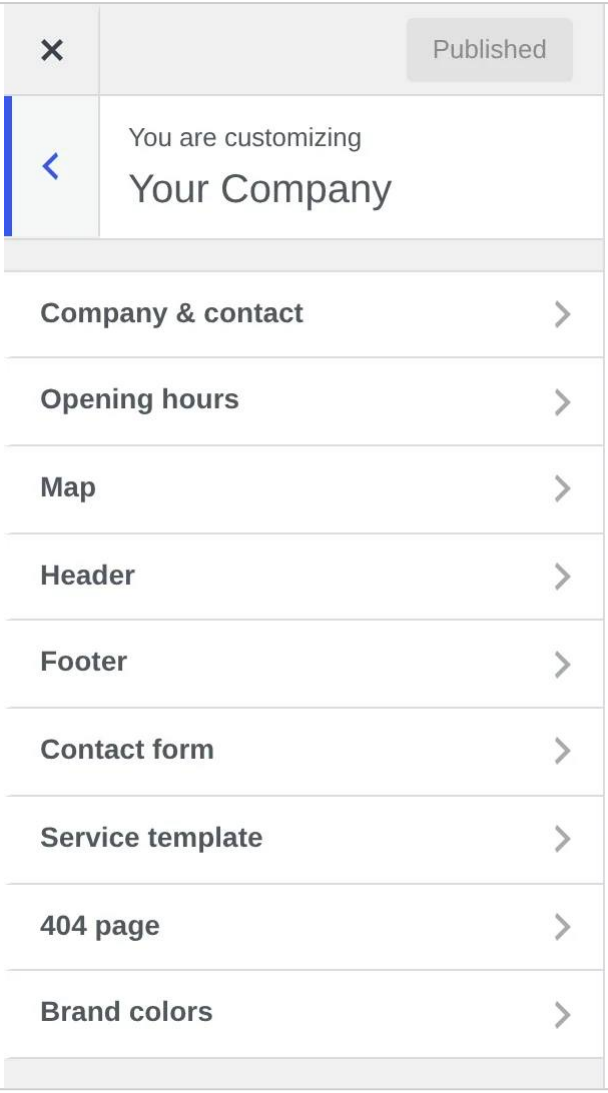

1. Go to **Theme Options → Import content**.
2. Click **Import default content**.
3. Check the result list and the website.

Use it on a new installation, or to bring back a page you deleted by accident. Safe to run again at any time.

Set **Settings → Permalinks** to **Post name** once, so all page links work.

The Customizer

Company data, texts and colors that appear on many pages. You change them with a live preview of the website.

What each setting does

Theme panel

All theme settings are in one panel, named after the company. It has 9 sections, explained below.

Live preview

On the right you see the website. Most changes are shown there right away, before anything is saved.

Publish

The blue button at the top. Only after clicking it are the changes live for visitors.

How to use it

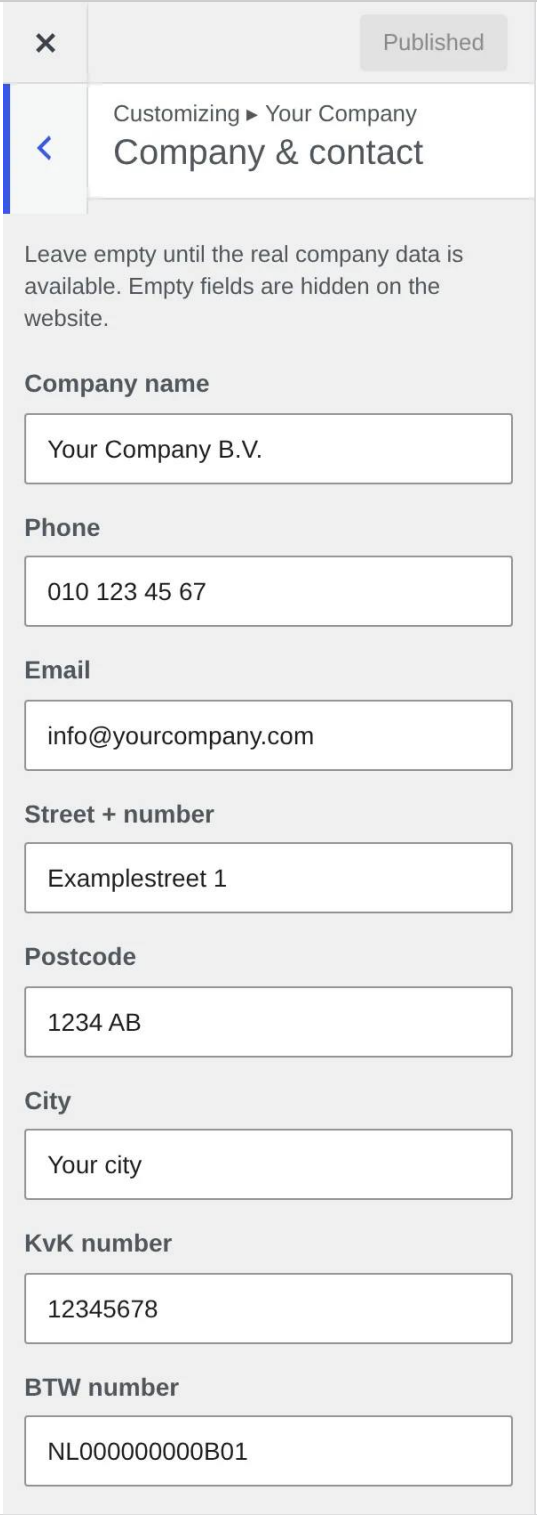

1. Go to **Appearance** → **Customize**.
2. Open the theme panel (the company name).
3. Choose a section and change the fields. Check the preview on the right.
4. Click **Publish**.

Use the **Desktop / Tablet / Mobile** icons at the bottom to check the preview on every screen size.

Close the Customizer without publishing? Your changes are lost.

Company & contact

The official company data. It is used all over the website.

What each setting does

Company name

Shown in the footer, on the holding page, on the login screen and in the data for Google.

Phone & Email

Shown in the footer and on the contact page. The phone number is also used by the call button of the mobile contact bar.

Street, Postcode, City

The address in the footer and in the data for Google. Also used for the route link when no route URL is set.

KvK & BTW number

Shown in the bottom line of the footer.

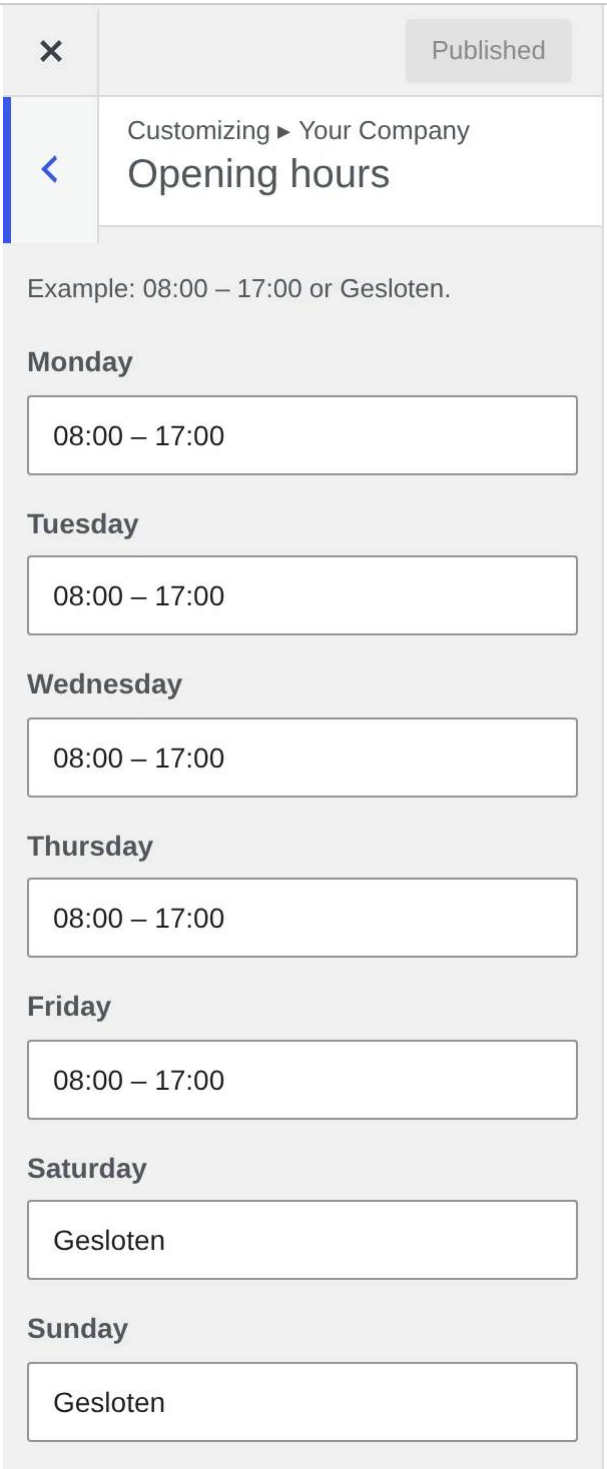

How to use it

1. Open **Customizer → theme panel → Company & contact**.
2. Fill in or correct the data.
3. Click **Publish**.

An empty field is simply hidden on the website. You can leave fields empty until the real data is known.

Opening hours

The opening hours per day.

What each setting does

Monday – Sunday

One field per day, for example `08:00 – 17:00` or `Gesloten`. Days in a row with the same hours are grouped automatically (for example “Maandag t/m vrijdag”).

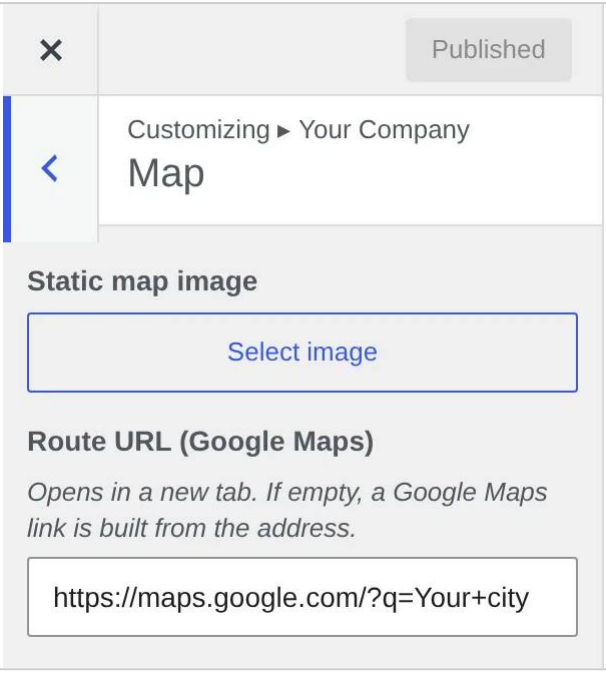

How to use it

1. Open **Customizer** → **theme panel** → **Opening hours**.
2. Change the hours per day.
3. Click **Publish**.

> The hours are shown on the contact page and are also sent to Google (local business data).

Map

The map on the contact page. It is a normal image, not an embedded Google map: better for privacy and speed.

What each setting does

Static map image

An image of the location, for example a screenshot of the map. Choose it from the Media Library.

Route URL (Google Maps)

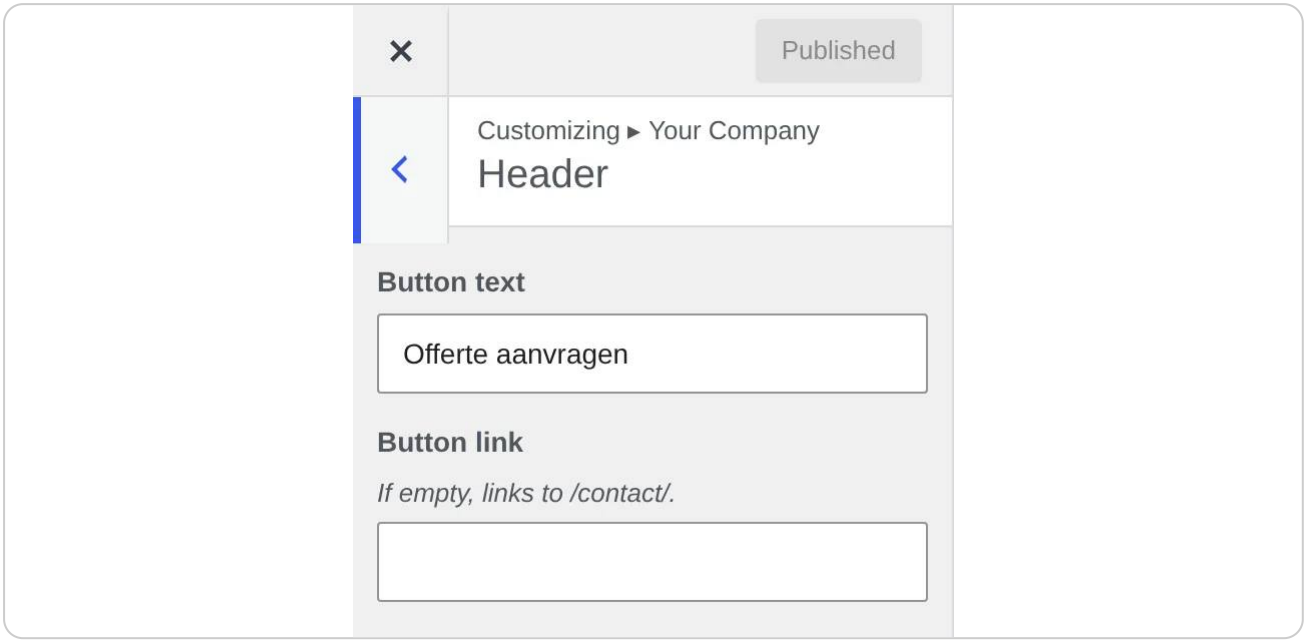

The link behind “Route bekijken”. Opens in a new tab. If empty, a Google Maps link is made from the address automatically.

How to use it

1. Open **Customizer** → **theme panel** → **Map**.
2. Click **Select image** and choose the map image.
3. Optional: paste the Google Maps link of the company.
4. Click **Publish**.

Header

The button at the top right of every page.

What each setting does

Button text

The text of the button, also used in the phone menu. **Leave empty to hide the button.**

Button link

Where the button goes. If empty, it goes to the contact page.

How to use it

1. Open **Customizer** → **theme panel** → **Header**.
2. Change the text or the link.
3. Click **Publish**.

Footer

The texts in the dark footer at the bottom of every page.

What each setting does

Tagline

The short slogan under the company name.

Footer text

One or two sentences about the company.

Copyright text

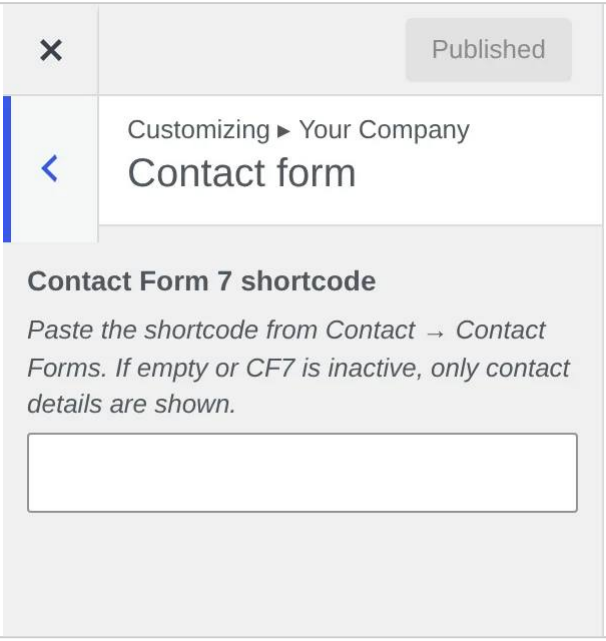

The text after the © line. The © symbol, the current year and the company name are added automatically.

How to use it

1. Open **Customizer** → **theme panel** → **Footer**.
2. Change the texts.
3. Click **Publish**.

Contact form

Which Contact Form 7 form is shown on the contact page.

What each setting does

Contact Form 7 shortcode

The shortcode of the form, for example `[contact-form-7 id="…"]`. When Contact Form 7 is active, the theme creates the standard form and fills this in automatically.

How to use it

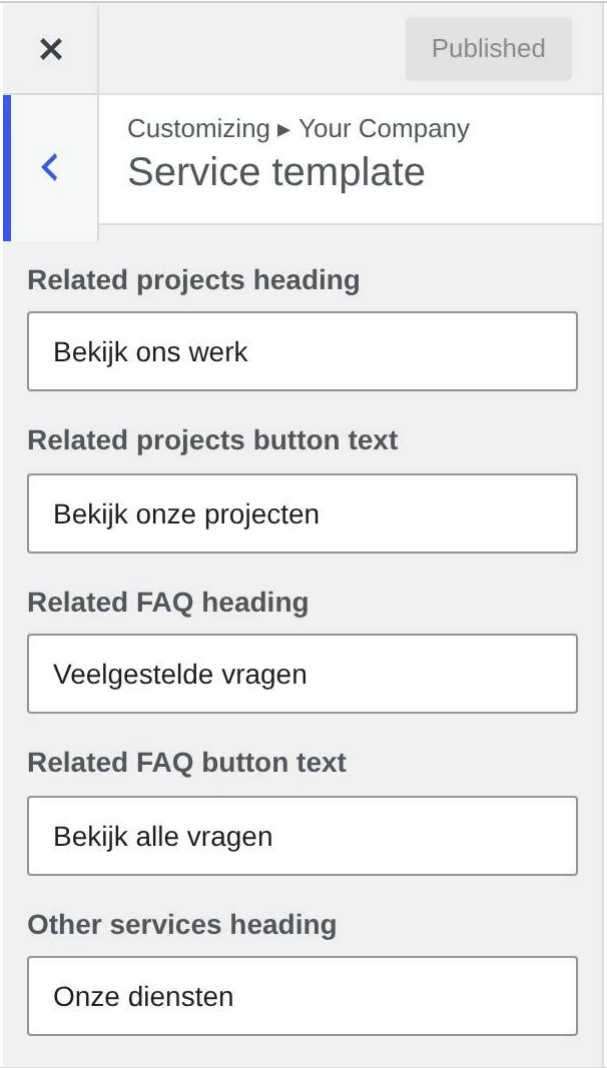

1. Only needed for another form: go to **Contact** → **Contact Forms** and copy its shortcode.
2. Open **Customizer** → **theme panel** → **Contact form** and paste it.

3 Click **Publish**.

⚠ Empty field or Contact Form 7 not active? Then the contact page shows only the contact details, without a form.

Service template

Headings and buttons that are the same on every service page.

What each setting does

Related projects heading & button

The heading and button above the projects on a service page (also used on project pages). Only shown when Projects is on in Theme Options.

Related FAQ heading & button

The heading and button of the frequently asked questions block.

Other services heading

The heading above the list of the other services at the bottom.

How to use it

1. Open **Customizer** → **theme panel** → **Service template**.
2. Change the texts.
3. Click **Publish** — all service pages change at once.

Tip: open a service page in the preview first, so you see the result right away.

404 page

The page visitors see when a link does not work (“page not found”).

What each setting does

Heading & Lead text

The title and the first text of the page.

Subheading & Sub text

A second block that helps the visitor further.

Button texts

The texts of the buttons to the homepage and to the services.

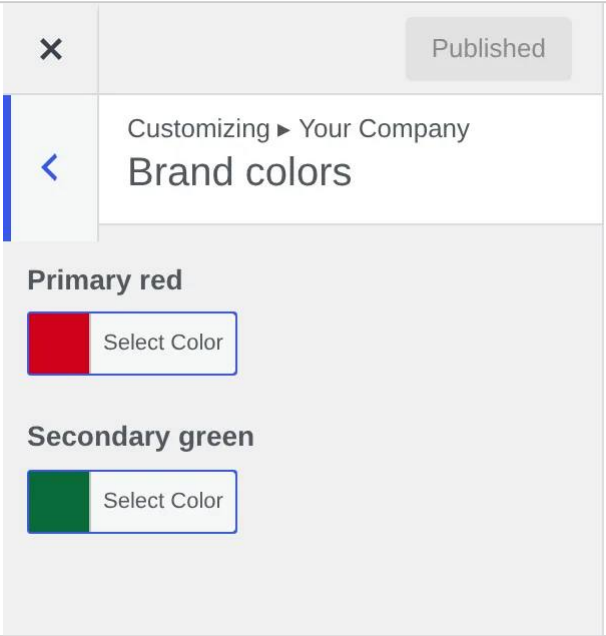

How to use it

1. Open **Customizer → theme panel → 404 page**.
2. Change the texts.
3. Click **Publish**.

To see the page: open any address that does not exist, for example `/test-404/` .

Brand colors

The two main colors of the website.

What each setting does

Primary red

The main color: buttons, links, icons and accents.

Secondary green

The second color, used in accents such as the colored line under headings.

How to use it

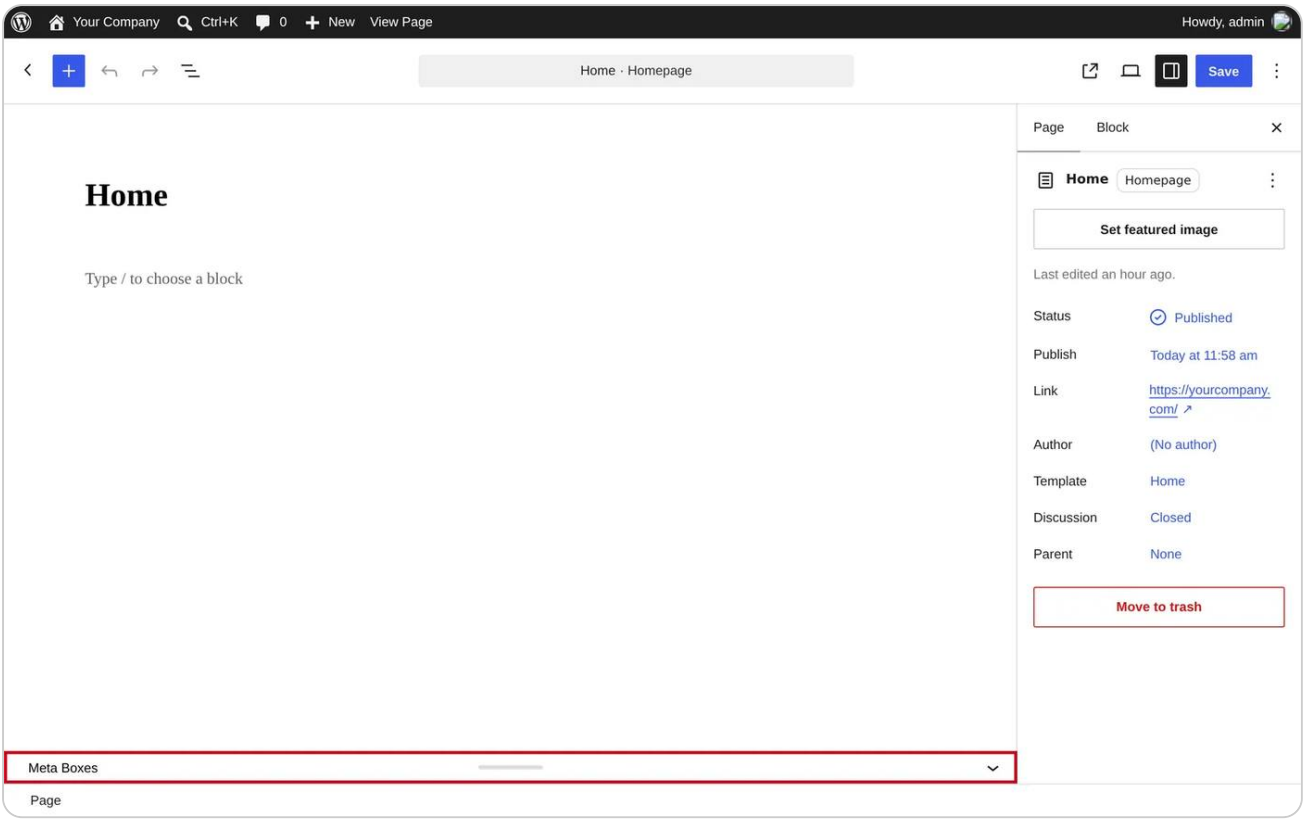

1. Open **Customizer** → **theme panel** → **Brand colors**.
2. Click **Select Color** and choose a color, or type a hex code (for example `#D0021B`).
3. Check the preview and click **Publish**.

> ⚠ Choose a dark enough color: white text on the buttons must stay easy to read.

> ⓘ Want the original colors back? Use the **Default** button next to the color.

Editing pages

The texts and images of the pages are filled in with fields (“meta boxes”) under the editor. Every page type has its own fields.

What each setting does

Where are the fields?

Open a page. At the bottom of the editor is the bar **Meta Boxes**. Click it (or drag it up) to see all fields.

Template

The **Template** of a page (in the side panel) decides which fields you see: Home, About, Services overview, Projects overview, Contact or FAQ.

Editor text

On these template pages the text comes from the fields, **not** from the editor. On a standard page (for example the privacy statement) you write the text in the editor; a table of contents is made automatically from the headings.

Rows

Some fields are lists of rows (sections, steps, questions). Use **Add row**, **Move up**, **Move down** and **Remove row**.

Empty fields

An empty field is not shown on the website. Some fields use a fallback; this is written under the field (for example “If empty, the page title is used”).

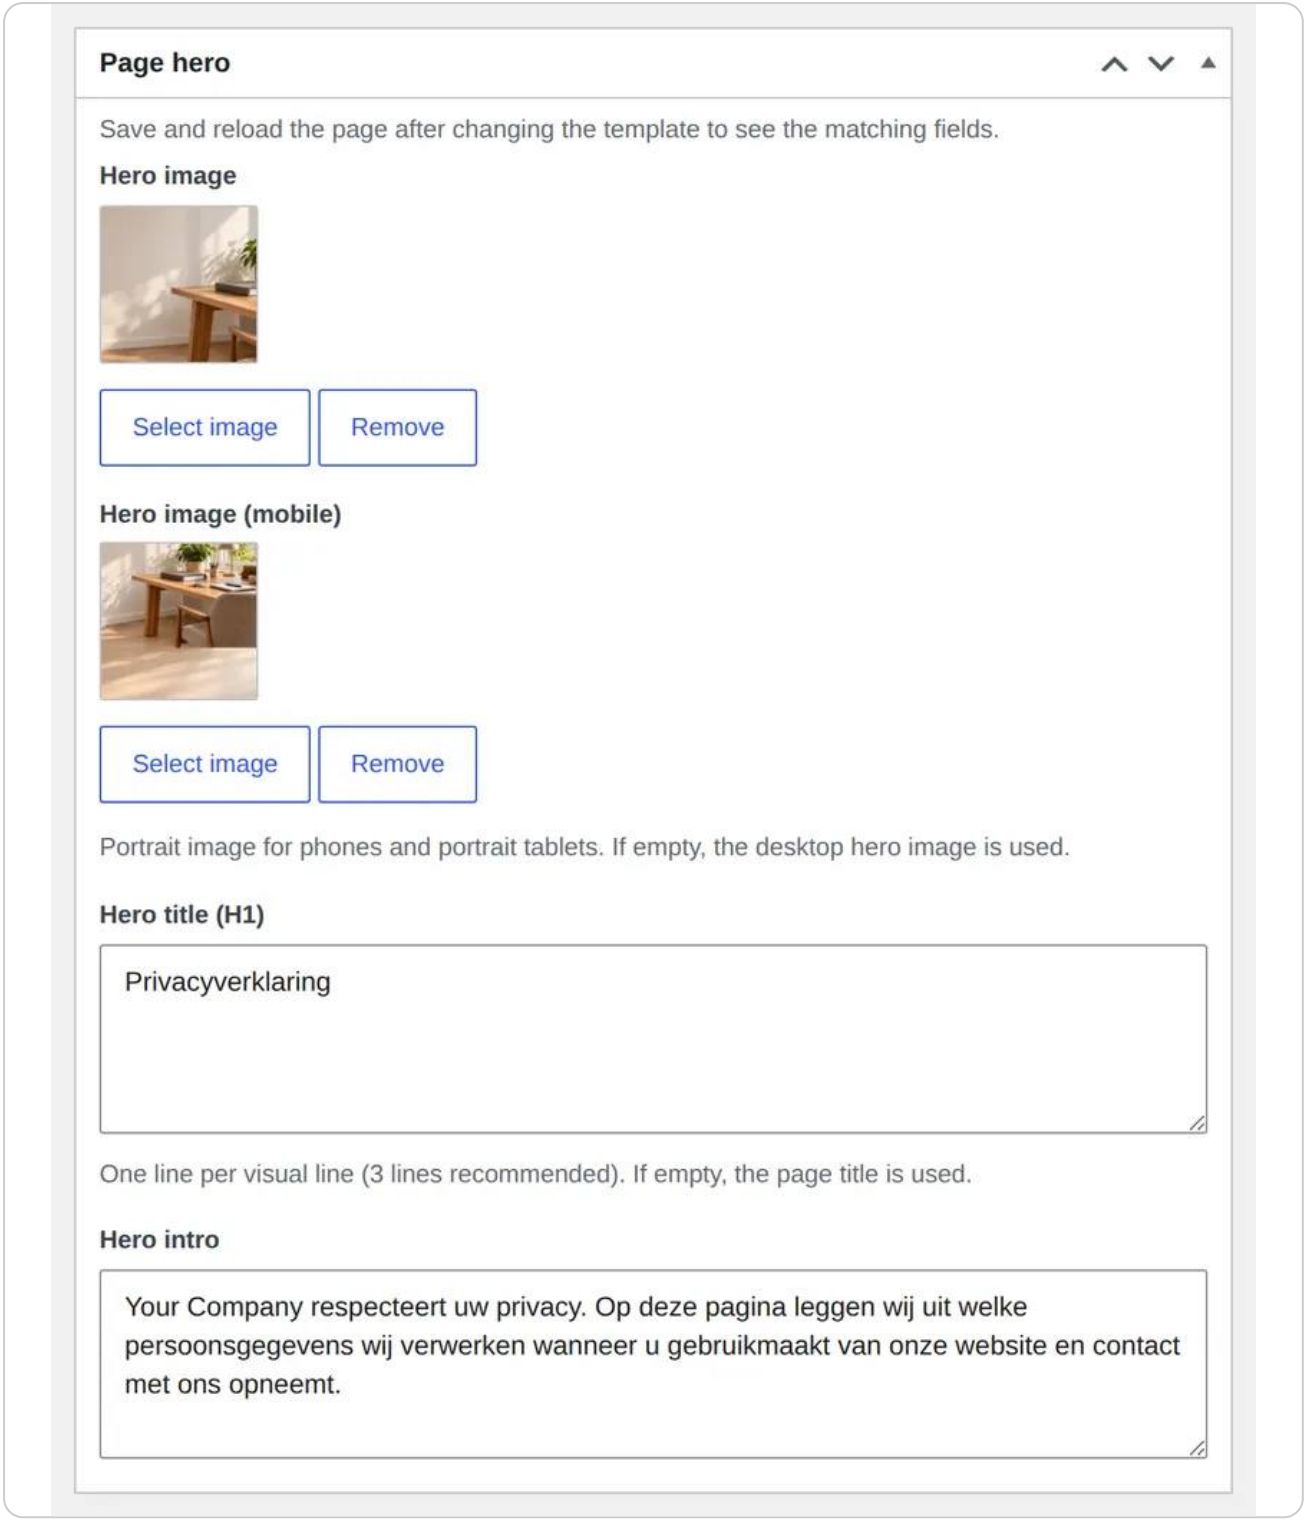

How to use it

1. Go to **Pages** and open a page.
2. Open the **Meta Boxes** bar at the bottom.
3. Change the fields.
4. Click **Save** and view the page.

⚠ Changed the template? Save and reload the page first — then the matching fields appear.

Page hero

The large image with the title at the top of a page. Every page has these fields, also standard pages.

What each setting does

Hero image

The wide image for computers.

Hero image (mobile)

A standing (portrait) image for phones and tablets. If empty, the normal hero image is used.

Hero title (H1)

The main title. Every line in the field is one line on the website (3 lines recommended). If empty, the page title is used.

Hero intro

The short text under the title.

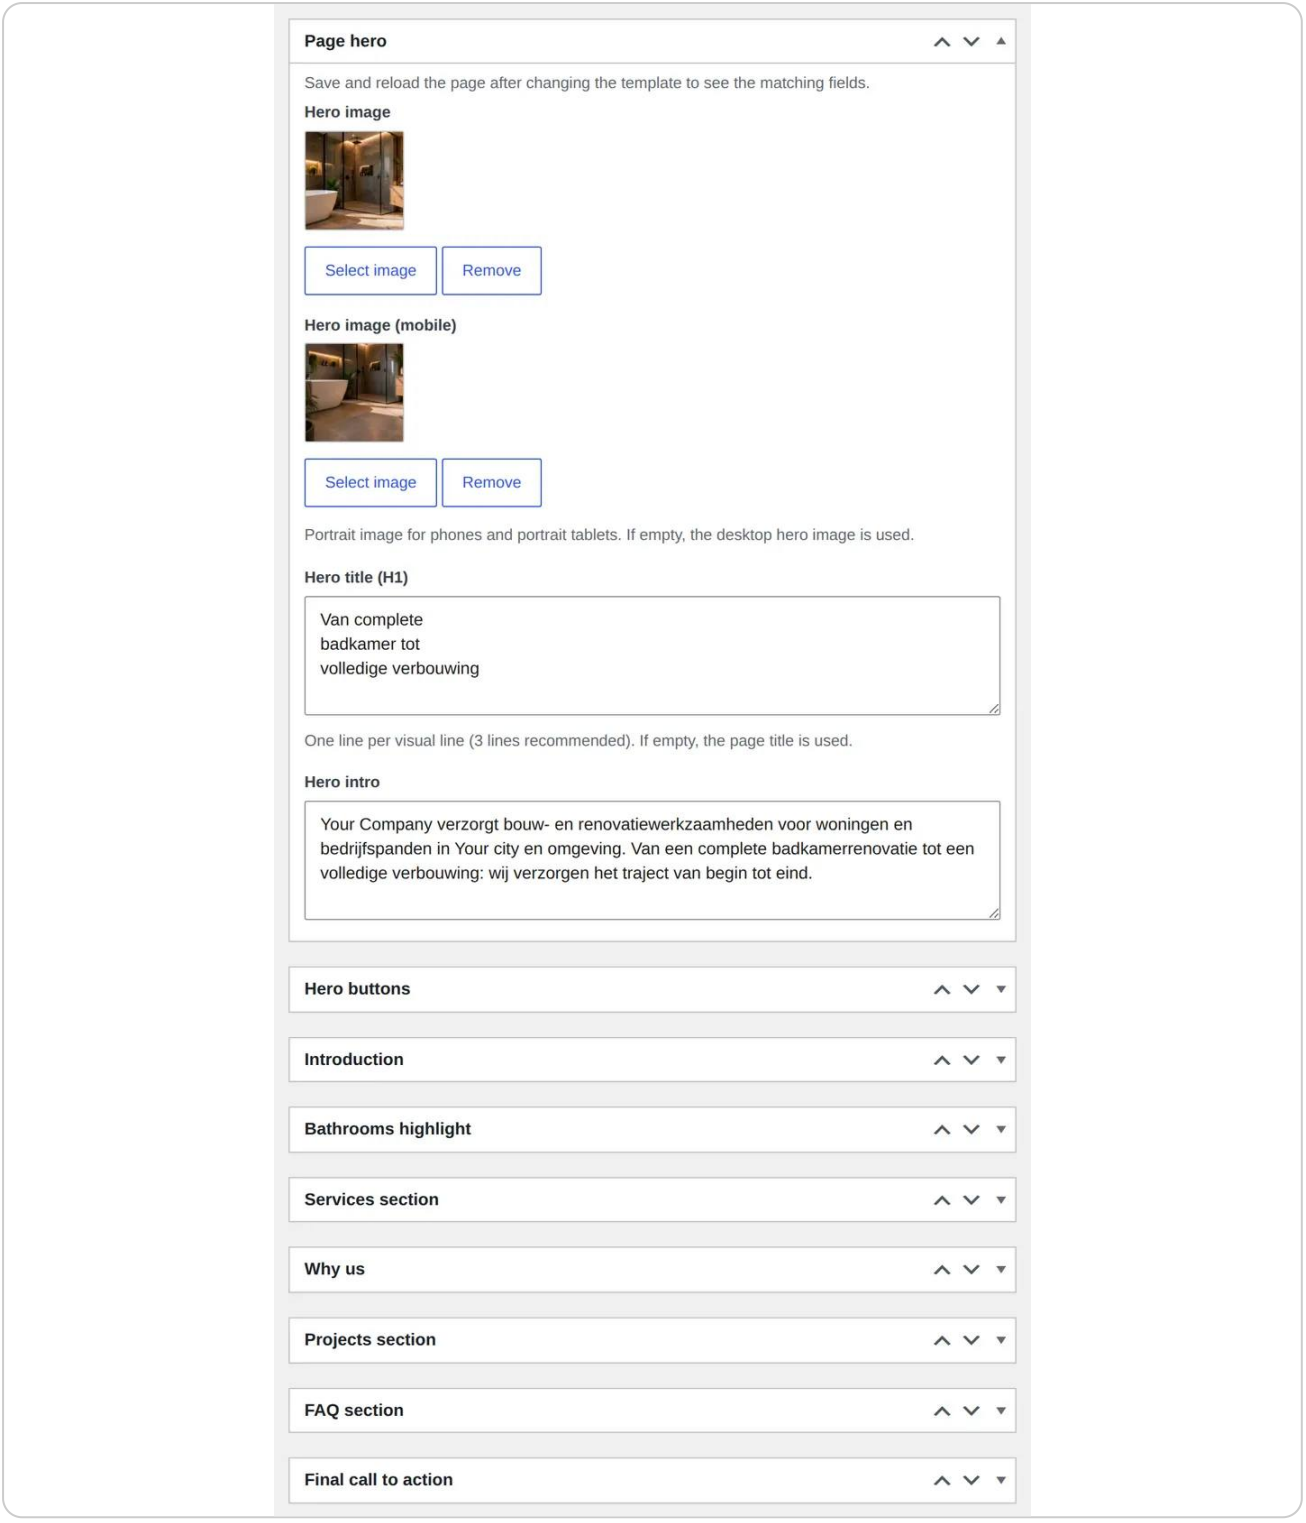

How to use it

1. Open the page and the **Page hero** box.
2. Click **Select image** to choose an image from the Media Library.
3. Write the title and intro.
4. Click **Save**.

Use large, sharp photos (at least 1920 px wide) in WebP or JPG. A dark part on the left keeps the white title readable.

Homepage

The homepage (template Home) has one box per section, in the same order as on the website.

What each setting does

Hero buttons

The two buttons in the hero. Empty links: the first goes to the header button link, the second to the services page.

Introduction

Heading and text under the hero.

Bathrooms highlight

A highlighted service with image, texts and a button.

Services section

Heading and intro. The services themselves come from **Services**, in their order.

Why us

Image, heading, text and a list of points (icon, title, text).

Projects & FAQ section

Headings and buttons. The questions are the ones marked **Show on homepage** on the FAQ page.

Final call to action

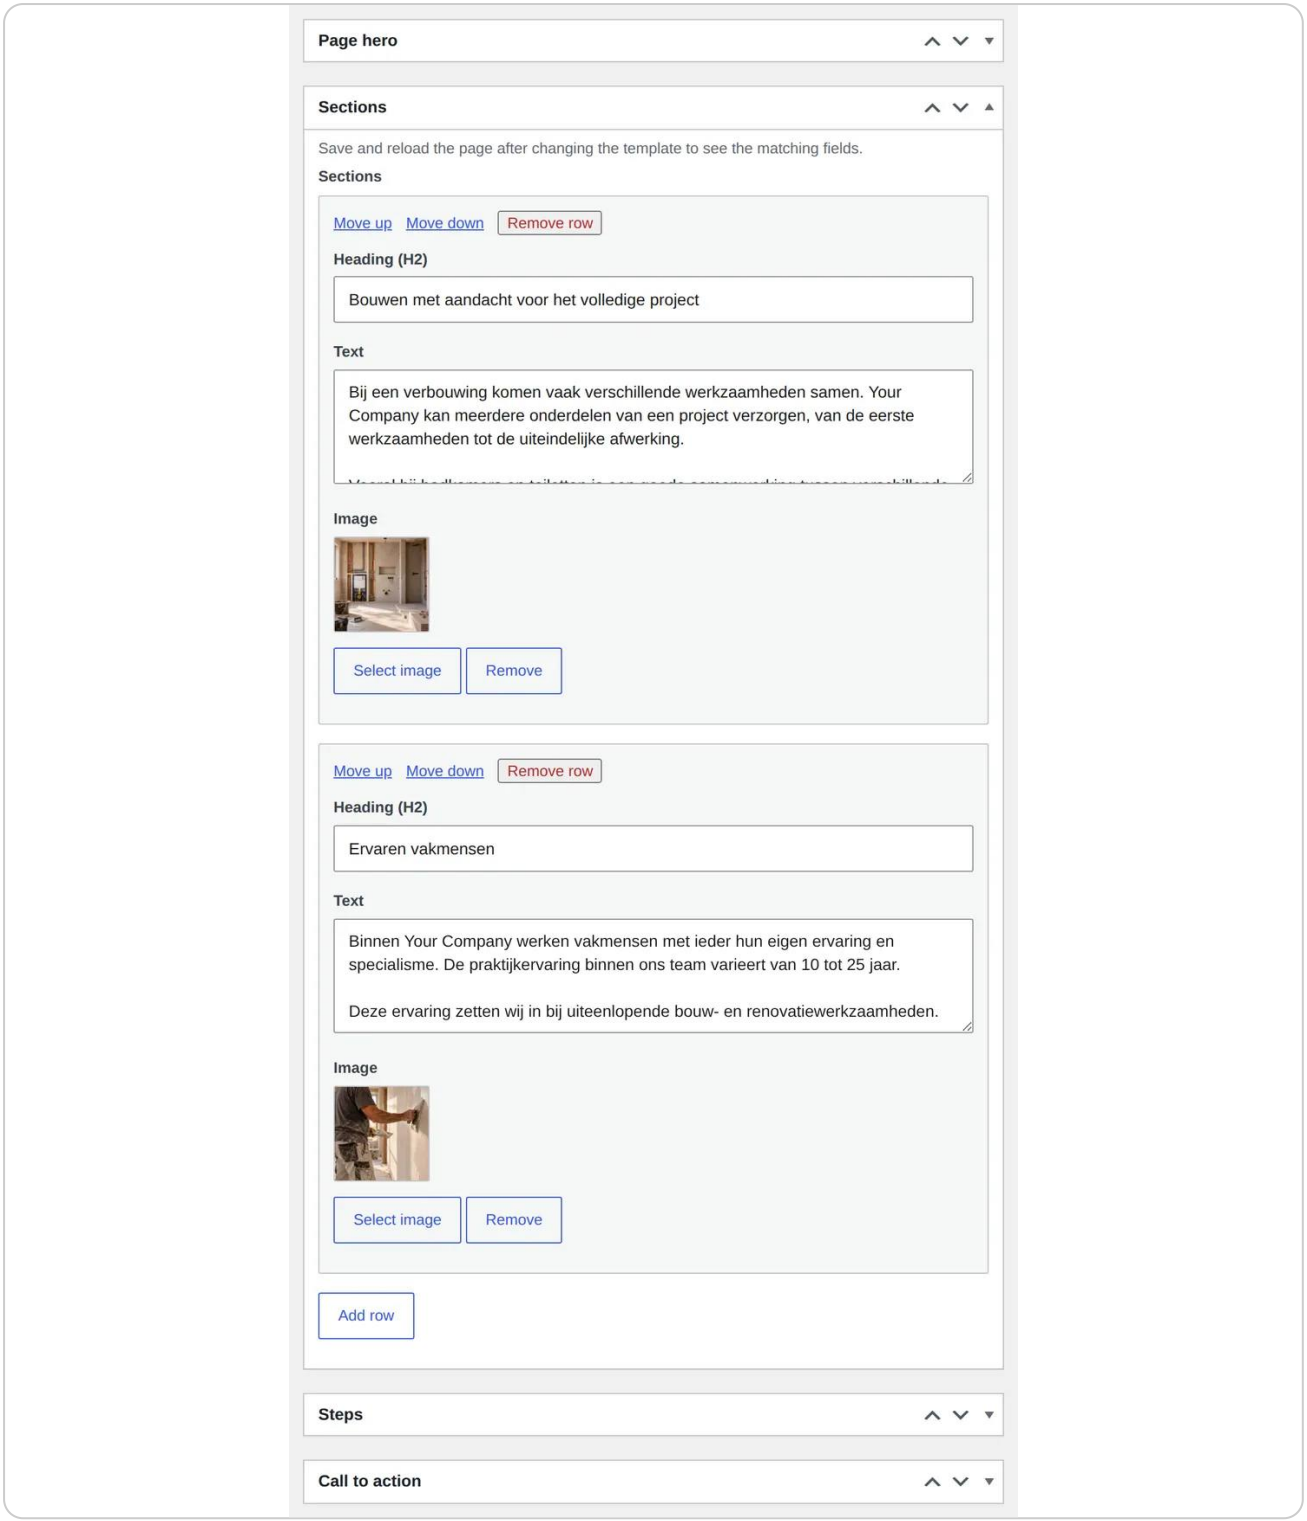

The last block: background image, heading, text and button.

How to use it

1. Go to **Pages** → **Home**.
2. Open the box of the section you want to change.
3. Click **Save**.

About page

The about page (template About) tells the story of the company.

What each setting does

Sections

Three rows are used: row 1 is text with the image on the right, row 2 is the image on the left, row 3 is the heading and text above the steps (its image is not used). Extra rows are not shown.

Steps

The working method in steps: title, text and image per step.

Call to action

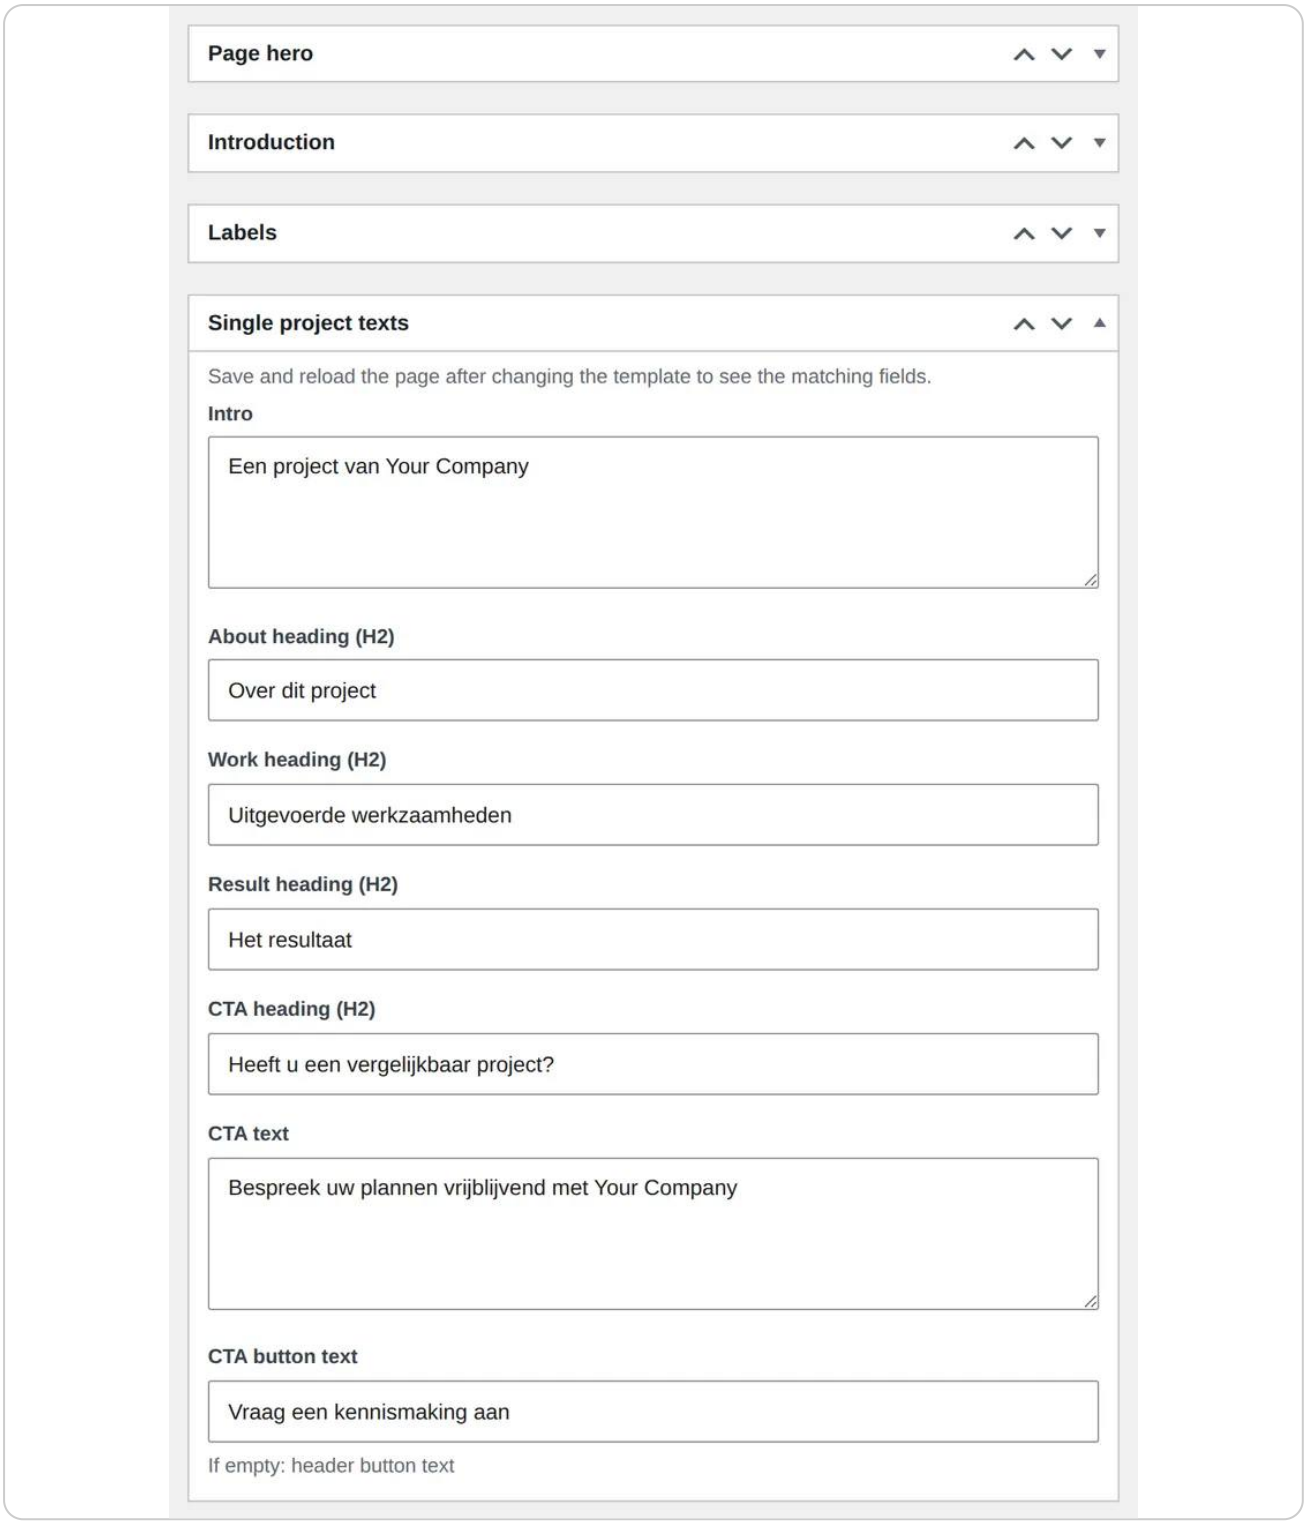

The block at the bottom: background image, heading, text and button.

How to use it

1. Go to **Pages** → **Over ons** (About).
2. Change the rows and the steps.
3. Click **Save**.

Projects page

The projects overview (template Projects overview). It also holds the texts that are the same on every project page.

What each setting does

Introduction

Heading and text above the featured project.

Labels

The filter button for all projects and the button text on the project cards.

Single project texts

The intro, the section headings and the call to action on **every** project page.

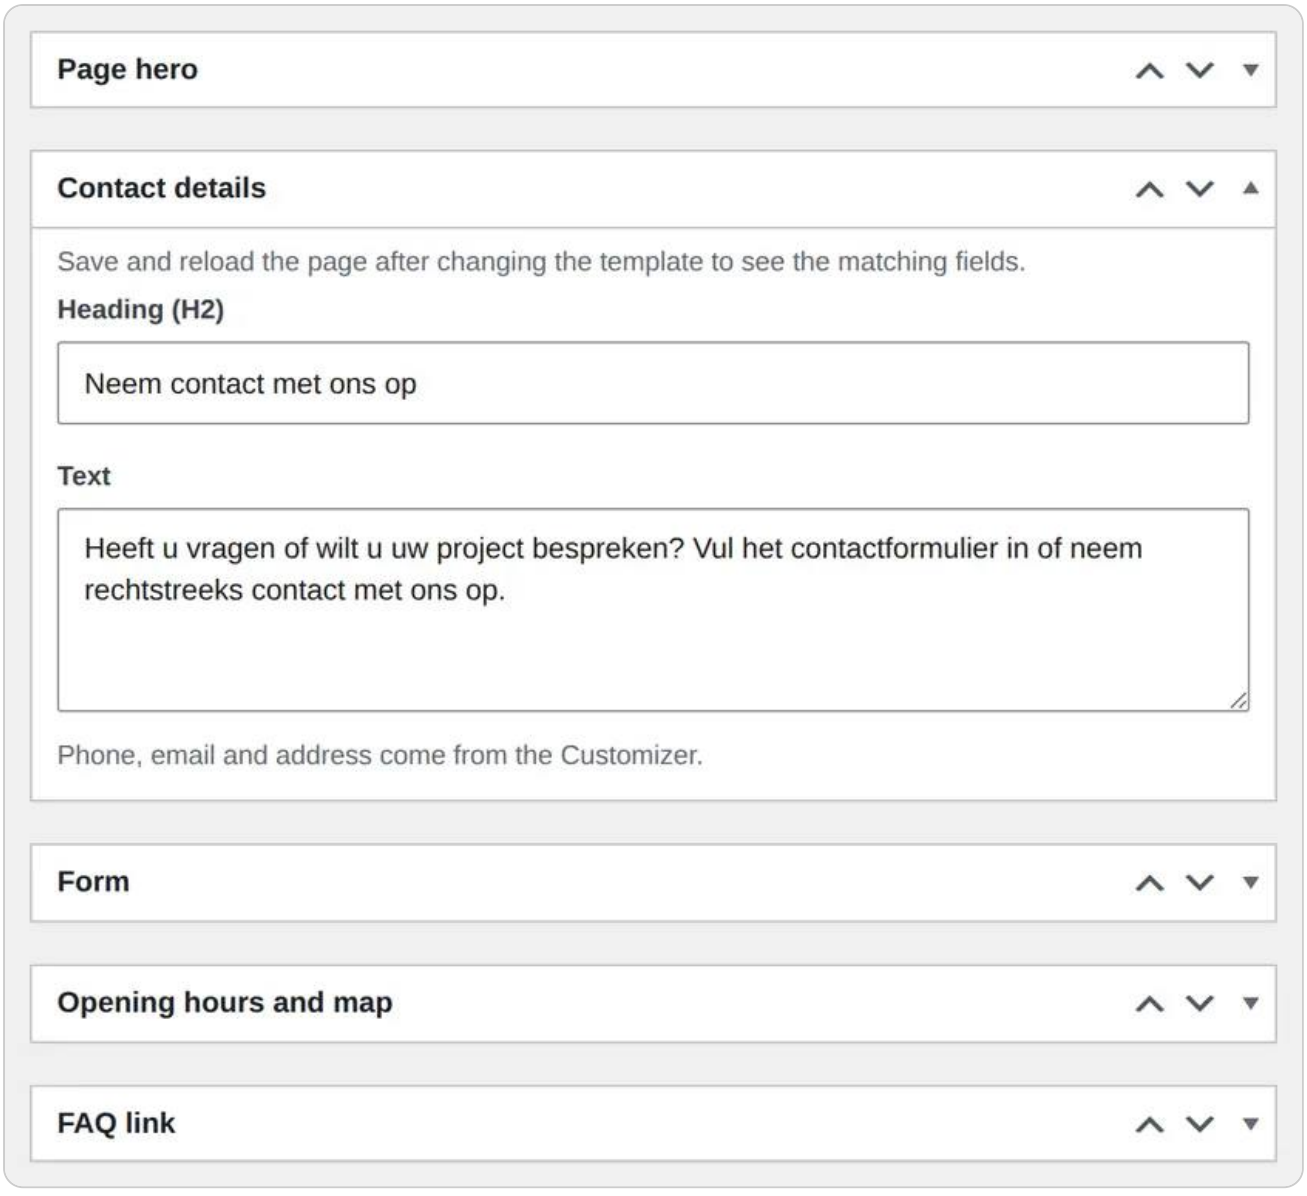

How to use it

1. Go to **Pages** → **Projecten**.
2. Change the fields.
3. Click **Save**.

ⓘ The projects themselves are added under **Projects** in the menu (see “Projects” below).

Contact page

The texts of the contact page (template Contact). The phone, e-mail, address and hours come from the Customizer.

What each setting does

Contact details

Heading and text of the dark contact block.

Form

Heading and text above the form.

Opening hours and map

The heading of the opening hours and the text of the map button.

FAQ link

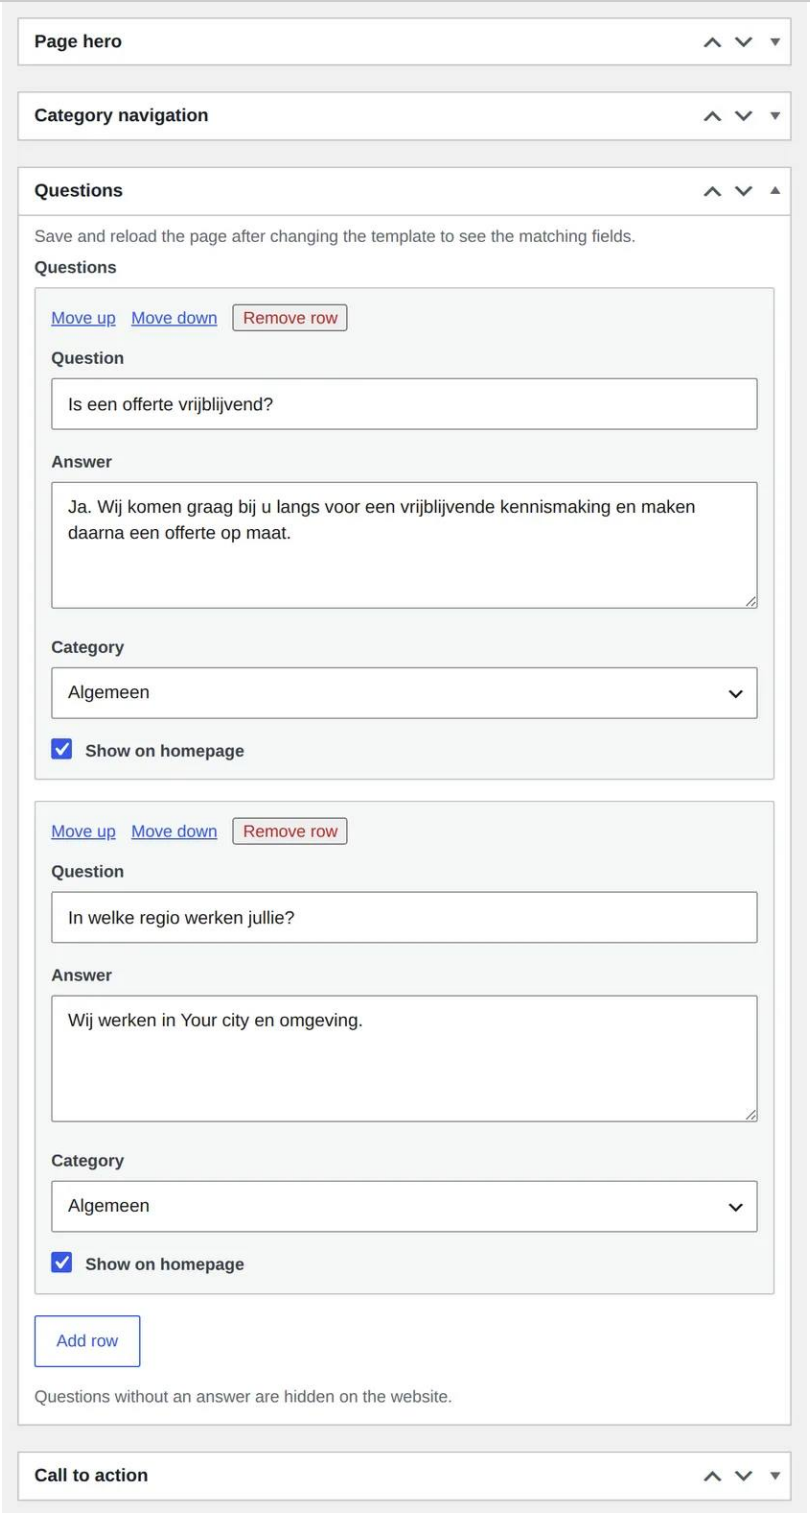

The text of the link to the FAQ page under the form.

How to use it

1. Go to **Pages** → **Contact**.
2. Change the texts.
3. Click **Save**.

FAQ page

All frequently asked questions are managed on the FAQ page (template FAQ).

What each setting does

Category navigation

The label above the category buttons.

Questions

One row per question: **Question**, **Answer** and **Category**. A question without an answer is hidden.

Show on homepage

Tick it to show the question on the homepage as well.

Call to action

The block at the bottom: background image, heading and button.

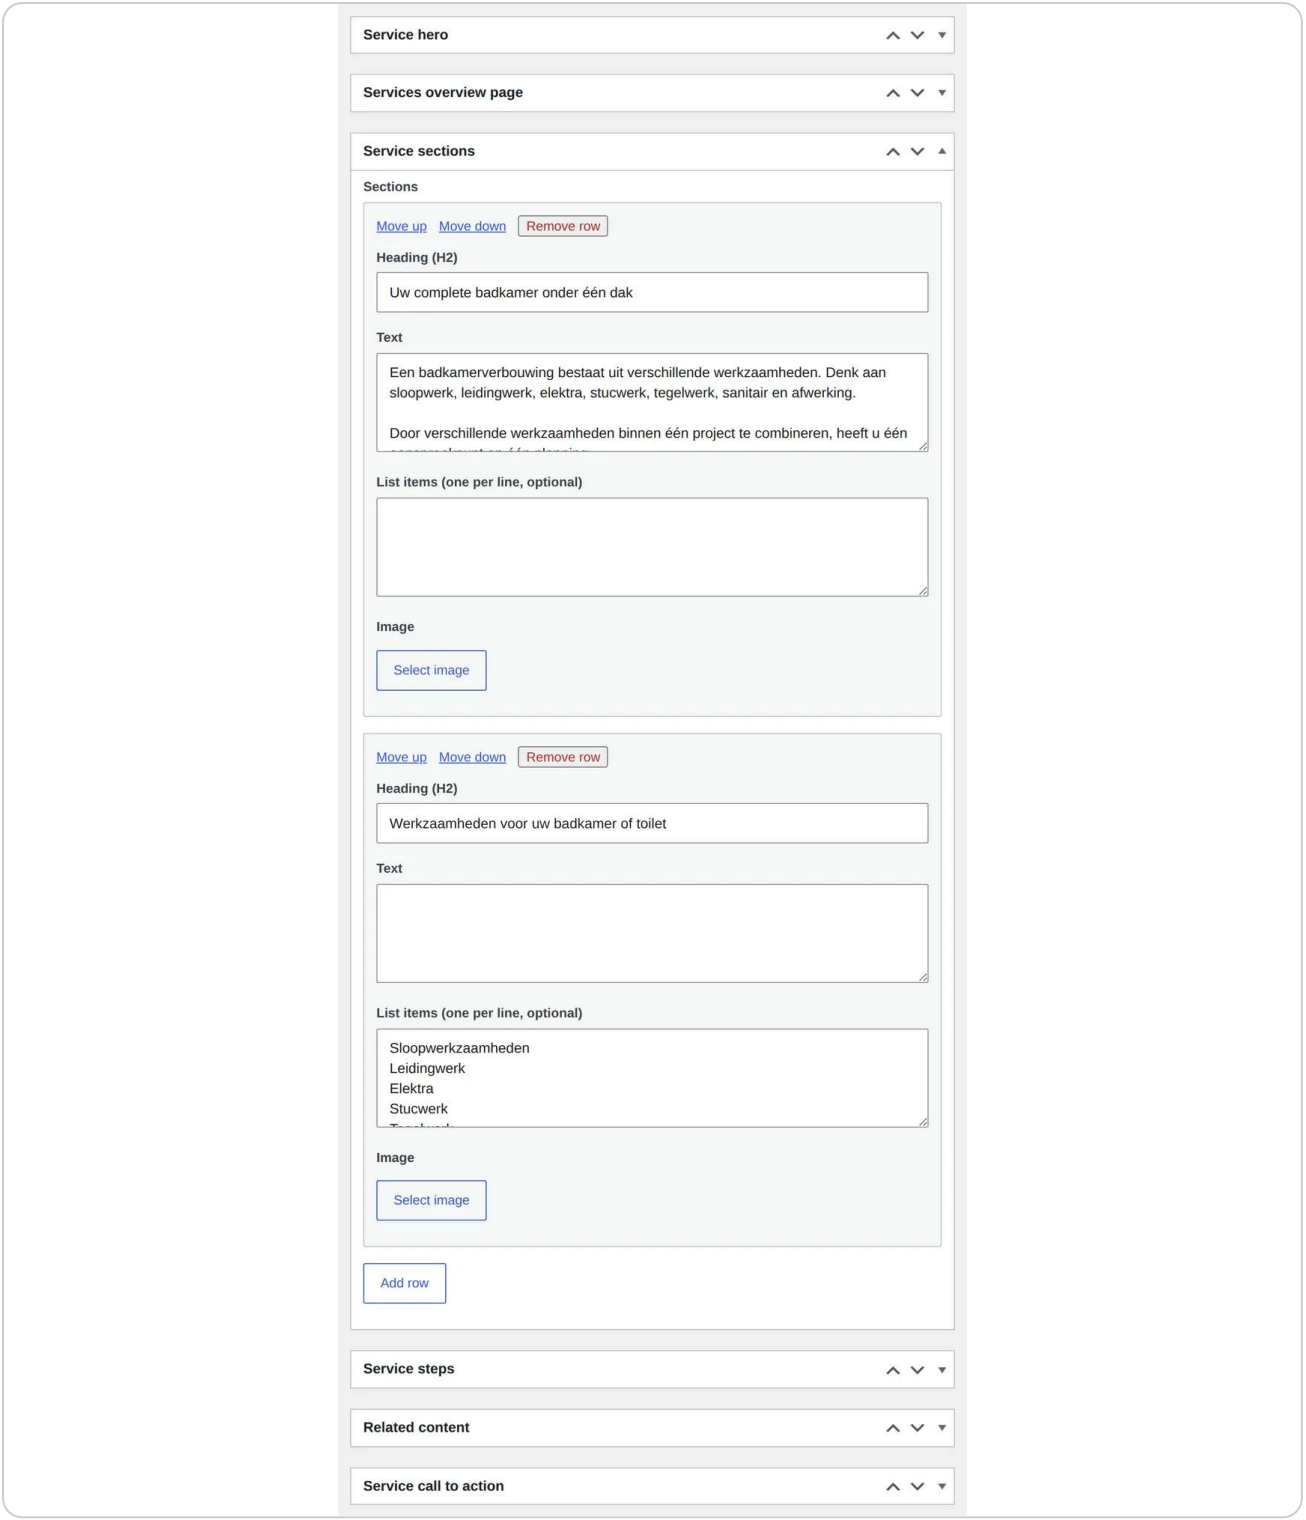

How to use it

1. Go to **Pages** → **Veelgestelde vragen**.
2. Click **Add row** and fill in the question, answer and category.
3. Use **Move up** / **Move down** to change the order.
4. Click **Save**.

ⓘ The category also decides which questions appear on a service page (see “Related content” under Services).

Services

Every service is its own page under **Services** in the menu. The services page itself only shows the list.

What each setting does

Featured image

The image of the service card on the services page, and the image of the first section when that has no image.

Order

In **Page Attributes** → **Order**: a lower number comes first in all service lists.

Service hero

Image, title and intro at the top of the service page. Empty title: the service name is used.

Services overview page

The icon, short text and button text of this service on the services page.

Service sections

Rows of heading, text, an optional list (one item per line) and an image.

Service steps

A heading and the steps of the working method.

Related content

Which project category and which FAQ category are shown on this service page.

Service call to action

Heading, text and button at the bottom. The button links to the contact page.

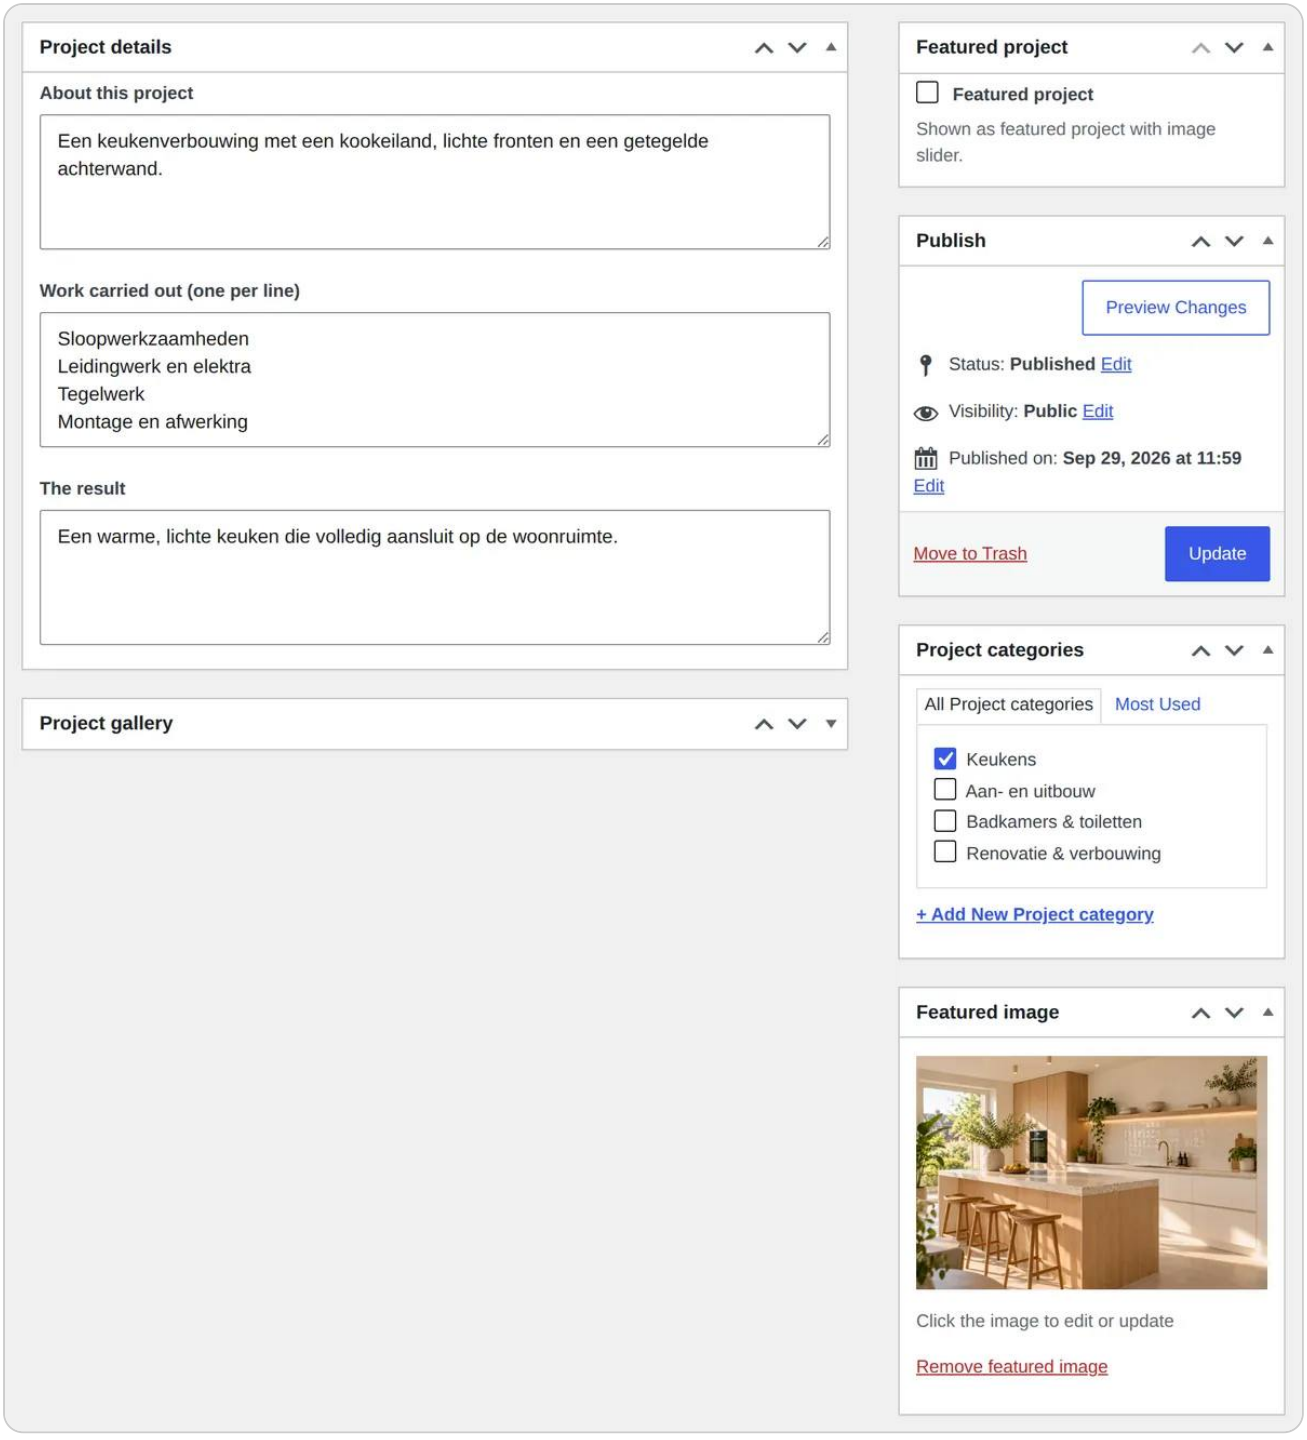

How to use it

1. Go to **Services** and open a service (or **Add New**).
2. Fill in the boxes and set a featured image.
3. Click **Save** / **Publish**.

> The headings of the related projects, FAQ and other services blocks are the same for all services: change them in **Customizer** → **Service template**.

Projects

Every project is its own page under **Projects** in the menu.

What each setting does

Featured image

The main photo: shown in the header of the project page and on the project card.

Project categories

Tick one category. It is used for the filter on the projects page and for the related projects on service pages.

Project details

About this project, **Work carried out** (one item per line) and **The result**.

Project gallery

More photos of the project. Visitors swipe through them on the project page.

Featured project

Tick it to show this project large at the top of the projects page, with its gallery as a slider. If more are ticked, the newest one is used.

How to use it

1. Go to **Projects** → **Add New**.
2. Write the title, set the featured image and the category.
3. Fill in the details and add gallery photos with **Add images**.
4. Click **Publish**.

Projects are only visible when **Projects** is on in Theme Options → General.
